#### Adjourn

This meeting will be held at 7:00 p.m. at the Thompson's Station Community Center 1555 Thompson's Station Rd West

## <u>Minutes of the Meeting</u> of the Municipal Planning Commission of the Town of Thompson 's Station, Tennessee June 26, 2018

### Call to Order:

The meeting of the Municipal Planning Commission of the Town of Thompson's Station was called to order at 7:00 p.m. on the 22<sup>nd</sup> day of May 2018 at the Thompson's Station Community Center with the required quorum. Members and staff in attendance were: Chairman Jack Elder; Vice Chairman Mike Roberts; Commissioner Shawn Alexander; Commissioner Brinton Davis; Alderman Ben Dilks; Commissioner Trent Harris; Commissioner Bob Whitmer; Town Planner Wendy Deats and Town Attorney Todd Moore. Town Clerk Jennifer Jones was unable to attend.

#### Pledge of Allegiance.

### Minutes:

The minutes of the May 22, 2018 meeting were previously submitted.

# Commissioner Davis made a motion to approve of the May 22, 2018 meeting minutes. The motion was seconded and carried unanimously.

#### **Public Comment:**

None.

#### **Planner Report:**

Concept Plan for Tollgate Village to development 25.8 acres with 232 units consisting of townhomes, live/work, condominiums and mixed use and up to 60,000 square feet of commercial (Concept Plan 2018-003).

Mrs. Deats reviewed her report regarding the Concept Plan for Tollgate Village noting concerns that this project increases the trip generation beyond what was identified in the February 2017 traffic study and may require additional improvements to access. Additional information is requested prior to any further approvals. She also stated concerns that Tollgate Village has a total of 943 taps allocated for the development and this project likely exceeds the allocation and prior to future approvals, additional sewer may be necessary.

Troy Gardner with Ragan Smith came forward to speak on behalf of the applicant.

David McGowan with Regent Homes came forward to give more detail on the Concept Plan.

#### New Business:

# 1. Preliminary Plat for the development of phases 14-17 within the Fields of Canterbury (PP 2018-003).

Mrs. Deats reviewed her report and with the recommended contingencies, the preliminary plat will comply with the Land Development Ordinance, therefore, Staff recommends Planning Commission approval with the contingencies:

Municipal Planning Commission – Minutes of the Meeting June 26, 2018

Page 2

- 1. Prior to the approval of construction plans, the developer shall enter into a development agreement for the project.
- 2. Prior to the approval of construction plans, revise the traffic study to include the phasing and timing of signal operation and equipment be modified to provide a right turn overlap for the right turn westbound and left turn southbound.
- 3. Prior to the approval of construction plans, the landscaping plan shall be revised to incorporate all tree replacement as required by the ordinance.
- 4. Buffer type 3 (semi-opaque) shall be installed in between the project and the adjacent properties within the D1 zoning district.
- 5. Prior to the approval of construction plans, all applicable codes and regulations shall be addressed to the satisfaction of the Town Engineer. A drainage study shall be submitted to verify that drainage is managed adequately on site.
- 6. Street lights shall be incorporated into these phases to match the existing neighborhood and shall be documented on the construction drawings.
- 7. All construction traffic into these phases shall be required to use Lioncrest Lane. The construction of Lioncrest shall be coordinated with the Town's improvements to Critz Lane.
- 8. During construction, the developer shall comply with all recommendations of the geotechnical report dated June 2, 2017.

Jay Easter with Ragan Smith and Ryan Manners with Encompass came forward to give a presentation on behalf of the applicant.

Alderman Dilks then reviewed his presentation citing concerns with traffic on Critz Lane.

After discussion, Commissioner Roberts made a motion to defer Item 1, the Preliminary Plat for development of phases 14-17 within the Fields of Canterbury (PP 2018-003) until the July meeting and plan a work session with Barge and possibly BOMA to discuss the development on Critz Lane and the impact that has by adding additional residential units. The motion was seconded and carried by a vote of 6 to 1 with Commissioner Davis casting the dissenting vote.

2. Amendment to the Article III, Subdivision Regulation section 3.9.23 – Roadway Specifications and the inclusion of section 3.9.24 related to traffic studies (LDO Amend 2018-004).

Mrs. Deats reviewed her Staff report and Staff is requesting the Planning Commission adopt these standards in Article 3 of the Land Development Ordinance.

After discussion, Commissioner Roberts made a motion to defer Item 2, an amendment to Article III, Subdivision Regulation section 3.9.23 – Roadway specifications and the inclusion of section 3.9.24 related to traffic studies (LDO Amend 2018-004) until July meeting and discuss during work session.

3. Request from Alderman Shepard to amend Article 1, Sections 1.2.5, 1.3 and Article 4, Section 4.5 of the Land Development Ordinance (Zone Amend 2018-005).

Mrs. Deats reviewed her Staff report.

Municipal Planning Commission – Minutes of the Meeting June 26, 2018

Page 3

Alderman Graham Shepard came forward to speak on behalf of his proposal agreeing with the Staff recommendations.

After discussion, Commissioner Harris made a motion to send Item 3, a request from Alderman Shepard to amend Article 1, Sections 1.2.5, 1.3 and Article 4, Section 4.5 of the Land Development Ordinance with Staff recommendations and the modification to add garage space to the Board of Mayor and Alderman. The motion was seconded and carried by vote of 5 to 2 with Commissioners Davis and Whitmer casting the dissenting votes.

There being no further business, Alderman Dilks made a motion to adjourn. The motion was seconded and the meeting was adjourned at 8:18 p.m.

- **DATE:** July 17, 2018
- **TO:** Planning Commission
- **FROM:** Wendy Deats, Town Planner
- SUBJECT: Planner Report 7/24/2018

## Parsons Valley Concept Plan (CP 2018-004)

Ragan Smith has submitted a concept plan for review of a development consisting of 351 units including single-family and townhomes on 118.83 acres located along the east side of Columbia Pike, south of Thompson's Station Road East within the D3 zone.

## Zoning/Concept Plan

The land, consisting of 118.83 acres is located within the D3 zone. The site is located on Columbia Pike with access on Thompson's Station Road East. The subject site is zoned D3 which is intended for "higher density residential development where urban services and facilities, including public sewer, are provided or where the extension of such services and facilities will be available prior to development" (Section 1.2.7) and permits a density of three units per acre.

The project proposes 351 residential units which will consist of 228 single-family and 123 townhomes, for a density of 2.95 units an acre. Lot widths vary on the concept plan from 22 feet for townhome lot to 50 feet for village lots and 57 feet for garden and cottage lots. Setbacks are identified as 10 feet for the front yard and secondary frontages, 15 feet for the side yard aggregate with a minimum of five feet and 20 feet for the rear yard.

Phone: (615) 794-4333 Fax: (615) 794-3313 www.thompsons-station.com

1550 Thompson's Station Road W. P.O. Box 100 Thompson's Station, TN 37179

The site requires a buffer 3 (semi opaque screen) between the adjacent properties and the project site to a height of at least 20 feet. A landscaping plan was not submitted but will be required during plat review.

## Block Lengths

The project proposes a roadway network, which in some areas will exceed the maximum permitted block length to which the developer is seeking administrative relief. The site, zoned D3 is permitted to have a maximum block length of 800 feet. Section 3.8.3 designates the block length and provides a provision for the Town Planner to "adjust the length of a block face by up to 10% by administrative deviation to accommodate site specific conditions" or exempt blocks "adjacent to undeveloped land, areas unsuitable for development, or pre-existing incomplete blocks from a limitation on block length buy administrative deviation."

Road A has a block length of 1,108 feet. The road, located in the southeast corner of the property is adjacent to open space, in proximity to an area within the RHPA which is also set aside in permanent open space and the land to the east is undeveloped land and can therefore be exempted.

Road B has a block length of 816 feet. This length exceeds 10% and the road does not meet the criteria to be exempt. Staff believes a modification to the plan can be done to achieve compliance with block length requirement. After discussions with Staff, the developer intends to reduce the block length to 800 feet.

Road G has a block length of 819 feet. The block length is determined by a pre-existing road (Station South Drive) which dictates the location of the intersection, therefore, can be exempted.

Road H has a block length of 2,035 feet. The road is located adjacent to the site perimeter, which is undeveloped land and can be exempted. The location of this road, given the adjacency to the neighboring parcel can provide a future connection should the neighboring property be developed.

## Open Space/ Amenities

Development of the site includes 53.47 acres set aside for open space, which will comply with the 45% open space requirement. Several civic spaces are proposed as part of the open space, including a recreation lot which will contain a pool amenity. The project requires two amenities, which the pool and other civic spaces will meet.

## Natural Resources

## Ridgeline Hilltop Preservation/Slopes

The site does contain land within the Ridgeline Hilltop Preservation Area (RHPA). Development within this area is prohibited unless a permit is obtained from the Board of Zoning Appeals. However, no development is proposed within the RHPA and all of this area will be designated and platted as part of the open space for the project. The site contains slopes between 15% and 25% that will be developed. Eleven lots are located within these slope areas and will be designated as critical lots. These lots will be subject to the requirements set forth for critical lots.

Phone: (615) 794-4333 Fax: (615) 794-3313 www.thompsons-station.com

1550 Thompson's Station Road W. P.O. Box 100 Thompson's Station, TN 37179

## Woodlands/Trees

The site has several wooded areas. A tree inventory has not been submitted for review and the natural resource map does not show any tree impacts. However, any trees over 18 inches in diameter proposed for removal will be required to have a replacement ratio of one and a half inches for every inch removed.

## Geotechnical

A geotechnical report was submitted for the project and is currently under review. The report noted the presence of a sinkhole on the subject site. Currently, the sinkhole is located within a single-family lot which is not permitted. The Land Development Ordinance Section 3.3.6 states "the disturbance, alteration or mitigation of such features shall be discouraged. All closed depressions shall be included in required or common open space along with a 50-foot buffer circling the highest contour of the closed depression. All sinkholes shall be incorporated into the overall storm water management plan." Therefore, a revision to the plan will be required to incorporate this sinkhole into the open space and provide the required buffer. All other recommendations for site work and development should be adhered to during the development process.

## Storm water Considerations

Storm water detention is proposed on site and will be reviewed further during the platting process.

Traffic

A traffic study was submitted for the project. The Town's traffic consultant has submitted comments to the developer's traffic engineer. All comments should be addressed to the satisfaction of the town traffic engineer prior to any plat approvals.

## Utilities

HB&TS and MTEMC have provided water and electricity availability letters. The applicant shall be responsible for any improvements to water and electric infrastructure to meet the demands of the project. The site does not have approval for wastewater, therefore, prior to the submittal of any further applications, the applicant should obtain approvals from the Board of Mayor and Aldermen. Sewer availability should be approved prior to any plat approvals.

## MEMORANDUM

То:	Wendy Deats	Town of Thompson's Station
From:	Jonathan Smith, P.E.	Barge Design Solutions
Date:	July 2, 2018	
Project ID:	36727-06	
Re:	Pearl Street Partners TIS Comme	ents

This memorandum presents the preliminary review comments for the Traffic Impact Study (TIS) provide for the proposed Pearl Street Partners development. The following comments are preliminary in nature and it is recommended that the study be revised and resubmitted following a review of these comments.

- 1. The intersection turning movement counts were collected when school was out of session with no explanation or adjustment provided. When the collected counts are compared to the nearby TDOT count station data, there are appears to be significant discrepancy between the data sets.
- 2. The TIS did not provide any existing or recommended signal timing information for the signalized intersection of Thompson's Station Road and US 31 Columbia Pike.
- 3. There are locations identified (in table 12) with failing levels of service where mitigation measures are not provided.
- 4. The TIS did not provide collision rates for the data presented.
- 5. The TIS did not provide any collision information along the roadways, it only presents intersection related collisions.
- 6. The TIS did not provide any sight triangle information for the site access driveways. Site triangle information should be provided with the updated TIS.

If you have any questions about the above comments, please do not hesitate to contact our office.

## Introduction

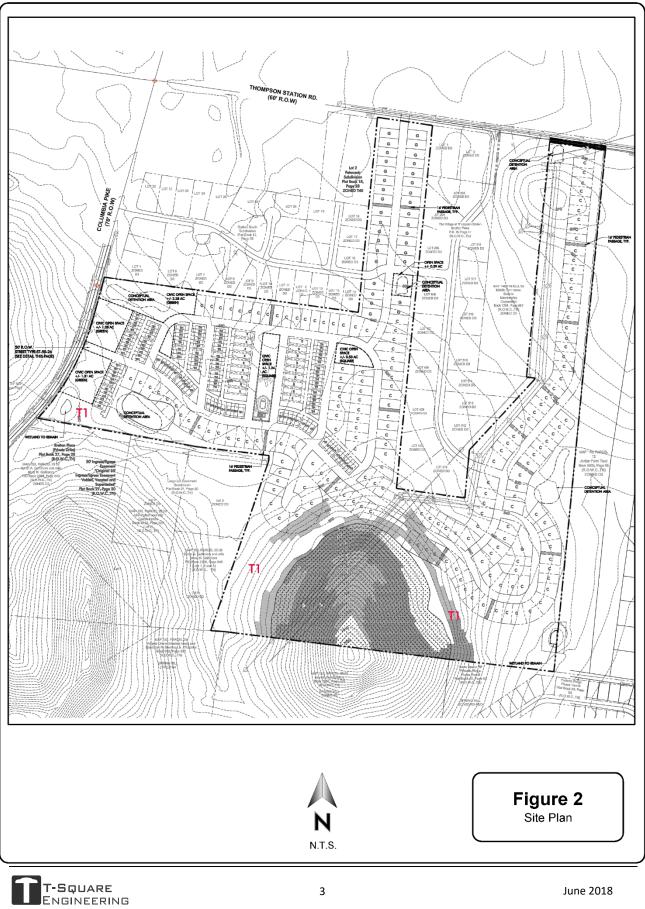

The purpose of this study is to analyze the traffic impacts on the surrounding roadway network associated with the proposed Thompson's Station Road Subdivision along Thompson's Station Road and Columbia Pike in Thompson's Station, TN. The development will consist of approximately 230 single-family homes and 123 townhomes.

As shown on the Location Map and Preliminary Site Plan on Figures 1 and 2, respectively, the property is located on Thompson's Station Road and Columbia Pike. The development is proposing three (3) site access points; one (1) to be located on the east side of Columbia Pike approximately 850 feet south of the intersection of Columbia Pike and Station South Drive, one (1) to be located on the south side of Thompson's Station Road approximately 550 feet west of the intersection of Thompson's Station Road and Village Drive, and one (1) to be located on the south side of Thompson's Station Road and Village Drive, and one (1) to be located on the south side of Thompson's Station Road approximately 650 feet east of the intersection of Thompson's Station Road approximately 650 feet east of the intersections of Columbia Pike and Station South Drive and Thompson's Station Road and Village Drive to provide access to the site. The surrounding area is predominantly residential.

This study analyzes the existing and projected traffic operations of the roadway networks and intersections surrounding the proposed development. To evaluate the projected traffic operations, existing traffic volumes were grown (background traffic volumes) to a 2020 design year based on average traffic growth rates with estimated trips generated from the proposed development added. Lastly, improvement recommendations were presented to alleviate the expected traffic volume's effect on the existing roadway network.

## **Existing Study Area**

## **Existing Roadway Network**

The existing roadway network surrounding the proposed Thompson's Station Road Subdivision includes Thompson's Station Road, Columbia Pike, Station South Drive, Village Drive, and Clayton Arnold Road. Below is a description of each roadway serving the proposed development:

## **Thompson's Station Road**

Thompson's Station Road is functionally classified by the General Plan for Thompson's Station as a Collector. Near the project site, Thompson's Station Road is oriented in an east-west direction and provides a connection between Lewisburg Pike to the east and Carters Creek Pike to the west. Near the project site, Thompson's Station Road is a two (2) lane roadway with one (1) ten (10) foot travel lane in each direction (eastbound and westbound) and one (1) foot shoulders. The posted speed limit along Thompson's Station Road is 45 MPH.

## Columbia Pike

Columbia Pike is functionally classified by the General Plan for Thompson's Station as an Arterial. Near the project site, Columbia Pike is oriented in a north-south direction and provides a connection between the City of Franklin to the north and TN-396 to the south. Near the project site, Columbia Pike is a two (2) lane roadway with one (1) twelve (12) foot travel lane in each direction (northbound and southbound) and one (1) foot shoulders. The posted speed limit along Columbia Pike is 45 MPH.

## **Station South Drive**

Station South Drive is functionally classified by the General Plan for Thompson's Station as a Local road. Near the project site, Station South Drive is oriented in an east-west direction and provides a connection to Columbia Pike to the east and terminates to the west. Near the project site, Station South Drive is a two (2) lane roadway with one (1) twelve (12) foot travel lane in each direction (eastbound and westbound) and two (2) foot shoulders. The posted speed limit along Station South Drive is 25 MPH.

## Village Drive

Village Drive is functionally classified by the General Plan for Thompson's Station as a Local road. Near the project site, Village Drive is oriented in a north-south direction and provides a connection from Thompson's Station road to the north and terminates to the south. Village Drive is a two (2) lane roadway with one (1) eleven (11) foot travel lane in each direction (northbound and southbound) and two (2) foot shoulders. The posted speed limit along Village Drive is 25 MPH.

Sundown Drive Lane is functionally classified by the General Plan for Thompson's Station as a Collector. Near the project site, Clayton Arnold Road is oriented in a north-south direction and provides a connection from Critz Lane to the north and Thompson's Station Road to the south. Clayton Arnold Road is a two (2) lane roadway with one (1) ten (10) foot travel lane in each direction (northbound and southbound) and two (2) foot shoulders. The posted speed limit along Clayton Arnold Road is 45 MPH.

## **Existing Intersections**

This study analyzed four (4) existing intersections within the vicinity of the project site. The intersections analyzed are listed below with a brief description of each, and Figure 3 shows the existing lane geometry at the intersections.

## Thompson's Station Road and Columbia Pike

The existing intersection of Thompson's Station Road and Columbia Pike is a signalized intersection with four (4) approaches. The northbound approach of Columbia Pike has one (1) exclusive lane for left-turn movements with approximately 155 feet of storage and one (1) shared lane for through and right-turn movements. The southbound approach of Columbia Pike has one (1) exclusive lane for left-turn movements with approximately 155 feet of storage and one (1) shared lane for through and right-turn movements. The eastbound approach of Thompson's Station Road has

one (1) exclusive lane for left-turn movements with approximately 125 feet of storage and one (1) shared lane for through and right-turn movements. The westbound approach of Thompson's Station Road has one (1) exclusive lane for left-turn movements with approximately 100 feet of storage and one (1) shared lane for through and right-turn movements.

## **Columbia Pike and Station South Drive**

The existing intersection of Columbia Pike and Station South Drive is an unsignalized intersection with three (3) approaches. The northbound approach of Columbia Pike has one (1) shared lane for through and right-turn movements operating under a free-flow condition. The southbound approach of Columbia Pike has one (1) shared lane for left-turn and through movements operating under a free-flow condition. The westbound approach of Station South Drive has one (1) shared lane for left-turn and right-turn movements operating under a stop condition.

## Thompson's Station Road and Village Drive

The existing intersection of Thompson's Station Road and Village Drive is an unsignalized intersection with three (3) approaches. The eastbound approach of Thompson's Station Road has one (1) shared lane for through and right-turn movements operating under a free-flow condition. The westbound approach of Thompson's Station Road has one (1) shared lane for left-turn and through movements operating under a free-flow condition. The northbound approach of Village Drive has one (1) shared lane for left-turn and right-turn and right-turn movements operating under a stop condition.

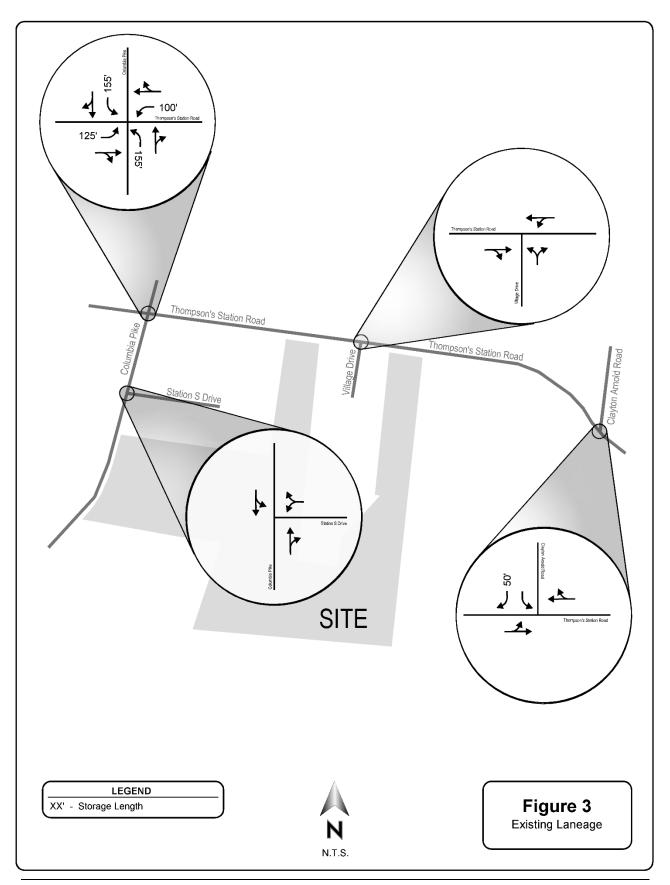

## Thompson's Station Road and Clayton Arnold Road

The existing intersection of Thompson's Station Road and Clayton Arnold Road is an unsignalized intersection with three (3) approaches. The eastbound approach of Thompson's Station Road has one (1) shared lane for leftturn and through movements operating under a free-flow condition. The westbound approach of Thompson's Station Road has one (1) shared lane for through and rightturn movements operating under a free-flow condition. The southbound approach of Clayton Arnold Road has one (1) exclusive lane for left-turn movements and one (1) exclusive channelized lane for right-turn movements with

approximately eighty (80) feet of storage operating under a stop condition.

## **Crash Analysis**

Crash data was obtained from 2011 to 2018 and was analyzed to determine the type and frequency of crashes at each of the existing study intersections. These crashes include Incapacitating Injury, Non-Incapacitating Injury, Property Damage crashes. The intersection of Thompson's Station Road and Columbia Pike shows a total of ninety-five (95) total crashes in or near the intersection. The intersection of Columbia Pike and Station South Drive shows a total of ten (10) total crashes in or near the intersection. The intersection. The intersection. The intersection of Thompson's Station Road and Clayton Arnold Road shows a total of twenty-two (22) total crashes in or near the intersection. The intersection of Thompson's Station Road and Village Drive shows no crashes occurring during 2011-2018. The table below outlines the crash types for each intersection.

## **Existing Traffic Volumes**

## Intersection Counts

To establish existing traffic volumes within the study area, T-Square Engineering conducted turning movement counts at the intersections of Thompson's Station Road and Columbia Pike, Columbia Pike and Station South Drive, Thompson's Station Road and Village Drive, and Thompson's Station Road and Clayton Arnold Road on a typical weekday in May 2018. The turning movement counts were conducted over a total of six (6) hours from 6:00 AM – 9:00 AM and 3:00 PM – 6:00 PM. From the turning movement counts, the AM and PM peak hour traffic volumes were established and determined to occur between 7:15 AM – 8:15 AM and 4:30 PM – 5:30 PM, respectively. Existing hourly turning movement counts are shown in Tables 1 through 4. Figure 4 shows the existing peak hour totals at the study intersections for the AM and PM peak hour periods. Appendix A contains the detailed turning movement counts at each intersection.

## **Existing Capacity Analyses**

To evaluate the existing traffic operations at the study intersections within the vicinity of the project site, AM and PM peak hour capacity analyses were performed per the calculations outlined in the <u>Highway Capacity Manual</u><sup>1</sup>(HCM). Levels of service (LOS), corresponding average delays, and 95<sup>th</sup> percentile queues were calculated for each turning movement. An LOS is a qualitative measure or grade used to distinguish how traffic is serviced at an intersection or along a roadway. The range of LOS is A to F, with A being the highest and F the lowest. The 95<sup>th</sup> percentile queue is the queue length (in vehicles) that has only a five (5) percent probability of being exceeded during the analysis period. The 95<sup>th</sup> percentile queue is not typical of what an average driver would experience, and driver experiences would be better characterized by the mean queue length. The table below details each LOS for signalized and unsignalized intersections, as specified within the HCM. For this analysis, optimized traffic signal timings were used at the intersection of Thompson's Station Road and Columbia Pike.

Level of Service*	Average Control Delay (seconds per vehicle)				
	Signalized Intersections	Unsignalized Intersections			
A	≤ 10	≤ 10			
В	> 10 and ≤ 20	> 10 and ≤ 15			
С	> 20 and ≤ 35	> 15 and ≤ 25			
D	> 35 and ≤ 55	> 25 and ≤ 35			
E	> 55 and ≤ 80	> 35 and ≤ 50			
F	> 80	> 50			
Source: HCM 2010, Exhibits 18-4 and 19-1					
* LOS color coding per Capacity Figures.					

## Table 6. Level of Service (LOS) Details

In order to determine the effectiveness of traffic operations within the study area, a minimum LOS or baseline needs to be established. Any LOS below the established baseline will be considered unsatisfactory. LOS C is generally acceptable for typical roadway function while LOS D is typically considered to be the minimum acceptable LOS. The following conditions shall be considered unsatisfactory for the purposes of this study:

- 1. Overall intersections with an LOS D, E, or F;
- 2. Individual traffic movements with an LOS E or F;

The existing intersections within the study segment were analyzed with existing traffic volumes under existing roadway conditions/geometries.

## Table 7. Existing Capacity Analyses

As shown in Table 6, the westbound approach to the intersection of Columbia Pike and Station South Drive currently operates at LOS E during the PM peak hour. All other critical movements to the study intersections surrounding the proposed development currently operate at a minimum of LOS D during the AM and PM peak hours with existing traffic volumes. Appendix C contains the detailed capacity analyses results.

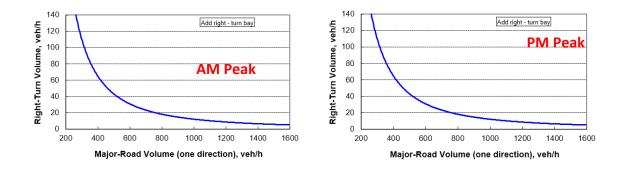

## **Intersection Assessments (Existing Conditions)**

Engineering assessments were performed on the intersections within the study area to identify underlying inefficiencies and solutions to alleviate any concerns associated with the existing geometries and traffic volumes along the roadway network. It should be noted that while all study intersections were analyzed, only intersections or traffic movements with deficiencies are presented within this section of the study.

## Major Road Approach Geometry Warrants - Projected

Major-road approach geometric warrants were performed based on Figures 2-5 and 2-6, respectively, in the NCHRP Report 457 – Evaluating Intersection Improvements: An Engineering Study Guide<sup>2</sup>.

Variable	AM Peak	PM Peak		
Major-road speed, mph:	45	45		
Major-road volume (one direction), veh/h:	320	135

Table 9. Major-Road Approach Geometry, SB Columbia Pike at Station South Drive

As shown in Table 8 and the corresponding graphs, it was determined that a southbound leftturn lane is presently warranted along Columbia Pike at its intersection with Station South Drive during the PM peak hour with existing traffic volumes.

## **Background Traffic Volumes**

To account for traffic growth within the vicinity of the project site prior to the completion of the proposed Thompson's Station Road Subdivision, background traffic volumes were established. Average annual daily traffic (AADT) volumes were obtained from Tennessee Department of Transportation (TDOT) count stations, and an average growth trend per year was established. This growth trend was used as a multiplication factor to grow the existing traffic volumes to the 2020 design year (development completion). Figure 5 displays the locations of the TDOT Count Stations within the surrounding area.

As shown in Figure 5, the average yearly percent change in traffic over a six (6) year period from 2011 - 2016 was 0.88%. Therefore, as a conservative estimate, the existing traffic volumes were grown by +2.00% per year for two (2) years. Figure 6 shows the background peak hour totals at the study intersections for the AM and PM peak hour periods.

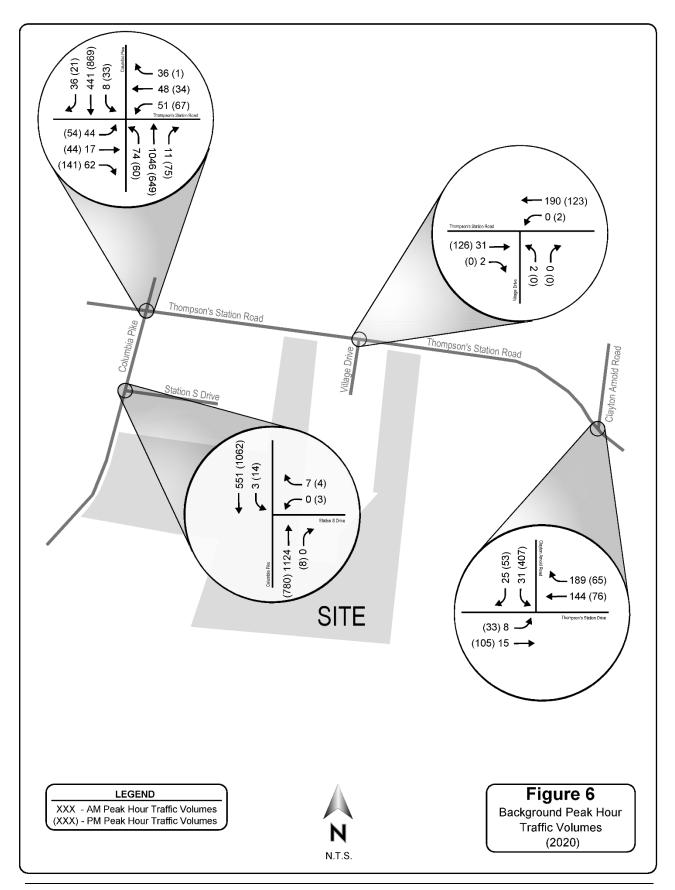

TDOT Count Station:	Williamson 000066		Williamson 000067		Williams	Average %	
Year	AADT	% Change	AADT	% Change	AADT	% Change	Growth
2016	2,693		19,816	-	2,800		
2015	2,666	1.01%	19,620	1.00%	2,617	6.99%	3.00%
2014	2,659	0.64%	21,013	-2.85%	2,952	-2.57%	-1.59%
2013	2,404	4.01%	19,666	0.25%	2,723	0.94%	1.73%

Average % Change	0.68%		0.40%		1.	0.88%	

Figure 5 TDOT Count Locations & Background Traffic Growth Trends

## **Background Capacity Analyses**

To evaluate the background traffic operations at the study intersections within the vicinity of the project site, the AM and PM peak hour capacity analyses were performed based on calculations outlined in the Highway Capacity Manual (HCM). Levels of service (LOS), corresponding average delays, and 95<sup>th</sup> percentile gueues were calculated for each turning movement. The intersections were analyzed based on existing roadway conditions and lane geometries with background traffic volumes. Appendix C contains the detailed capacity analyses results. For this analysis, optimized traffic signal timings were used at the intersection of Thompson's Station Road and Columbia Pike.

#### **Table 10. Background Capacity Analyses**

As shown in Table 9, the southbound through/right-turn movements to the intersection of Thompson's Station Road and Columbia Pike will operate at LOS F during the PM peak hour with the addition of the background traffic volumes. Even though these movements will operate at an unacceptable LOS, the overall intersection will operate at LOS D during the PM peak hour, which is acceptable. The westbound approach to the intersection of Columbia Pike and Station South Drive will continue to operate at LOS E during the PM peak hour with the addition of background traffic volumes. All other critical movements to the study intersections surrounding the proposed development will continue to operate at a minimum of LOS D during the AM and PM peak hours with the addition of background traffic volumes. Appendix C contains the detailed capacity analyses results.

#### Impacts

#### Traffic Generation

Trips were generated to establish projected traffic volumes for the proposed Thompson's Station Road Subdivision. Daily and peak hour trips were generated by formulas presented in the <u>Trip</u> <u>Generation Manual</u><sup>3</sup> based on the number of detached single-family homes and townhomes proposed by the development. As previously stated, the proposed Thompson's Station Road Subdivision is expected to consist of approximately 230 detached single-family homes and 123 townhomes. The Single-Family Detached Housing (210) and the Multi-Family Housing (220) ITE Land Uses were used to estimate the generated traffic volumes. Table 10 provides the new trips generated for the proposed development. Appendix B contains detailed trip generation calculations.

		Generated Traffic Volumes				
ITE Land Use (Code)	Units	Daily	AM Peak		PM Peak	
		Dally	Enter	Exit	Enter	Exit
Single-Family Detached Housing (210)	230 Dwelling Units	2,237	42	126	142	84
Multi-Family Housing (220)	123 Dwelling Units	889	13	45	45	26
TOTAL		3,126	55	171	187	110

Table 11. Thompson's Station Road Subdivision Trip Generation

## **Projected Traffic Distribution and Assignments**

For the purposes of this study, estimated directional distributions shown on Figure 7 were made for the proposed development's generated traffic volumes. The development of these directional distributions was established based on the following:

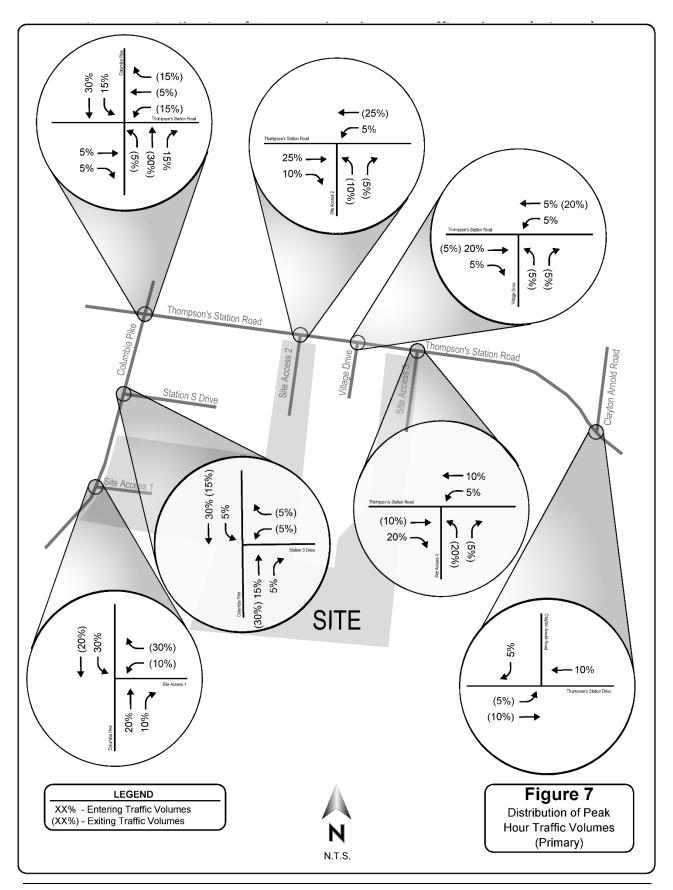

- Conducted hourly turning movement counts;
- Existing land use characteristics;
- Existing roadway network;
- Existing lane geometry of surrounding intersections;
- The development's proposed access locations;
- Locations of populations centers within the surrounding area;

The generated trips were assigned to the existing roadway network per the distributions shown on Figure 7, resulting in the generated peak hour traffic volumes shown on Figure 8. The generated peak hour traffic volumes were added to the background peak hour traffic volumes resulting in the total projected peak hour traffic volumes shown on Figure 9.

**T-SQUARE** Engineering

## **Projected Capacity Analyses**

To evaluate the projected traffic operations at the study intersections within the vicinity of the project site, AM and PM peak hour capacity analyses were performed. The capacity analyses include the total projected traffic volumes generated from the proposed development in addition to background traffic volumes. Levels-of-service (LOS), corresponding average delays, and 95<sup>th</sup> percentile queues were calculated for each turning movement. Appendix C contains the detailed capacity analyses results. For this analysis, optimized traffic signal timings were used at the intersection of Thompson's Station Road and Columbia Pike.

#### Table 12. Projected (No Improvement) Capacity Analyses

As shown in Table 11, the southbound through/right-turn movements at the intersection of Thompson's Station Road and Columbia Pike will operate at LOS F during the PM peak hour with the addition of projected traffic volumes. The eastbound through/right-turn movements at the intersection of Thompson's Station Road and Columbia Pike will operate at LOS E during the AM and PM peak hours with the addition of projected traffic volumes. The westbound through/rightturn movements at the intersection of Thompson's Station Road and Columbia Pike will operate

at LOS E during the AM peak hour with the addition of projected traffic volumes. Even though these movements will operate at an unacceptable LOS, the overall intersection will operate at LOS C and LOS D during the AM and PM peak hours, respectively, which is acceptable. The westbound approach to the intersection of Columbia Pike and Station South Drive will operate at LOS E and LOS F during the AM and PM peak hours, respectively, with the addition of projected traffic volumes. The westbound approach to the intersection of Columbia Pike and Site Access 1 will operate at LOS F during the AM and PM peak hours with the addition of projected traffic volumes. All other critical movements to the study intersections surrounding the proposed development will continue to operate at a minimum of LOS D during the AM and PM peak hours with the addition of projected traffic volumes. Appendix C contains the detailed capacity analyses results.

## **Intersection Assessments (Projected Conditions)**

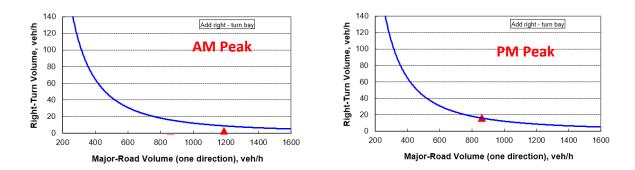

Engineering assessments were performed on the intersections within the study area to identify underlying inefficiencies and solutions to alleviate any concerns associated with existing and proposed geometries and traffic volumes along the roadway network.

#### Major Road Approach Geometry Warrants - Projected

Major-road approach geometric warrants were performed based on Figures 2-5 and 2-6, respectively, in the NCHRP Report 457 – Evaluating Intersection Improvements: An Engineering Study Guide<sup>4</sup>.

Table 13. Major-Road Approach Geometry, NB Columbia Pike	at Station South Drive
--	------------------------

Variable	AM Peak	PM Peak	
Major-road speed, mph:	45	45	
Major-road volume (one direction), veh/h:	1,186	858	
Major-road right-turn volume, veh/h:	3	17	
Limiting right-turn volume, veh/h:	9	16	
Right-turn bay warranted:	NO	YES	
Source: NCHRP Report 457: Evaluating Intersection Improvements: An Engineering Study Guide			

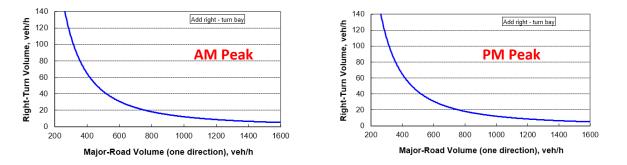

As shown in Table 13 and the corresponding graphs, it was determined that a northbound rightturn lane is warranted along Columbia Pike at its intersection with Station South Drive during the PM peak hour with projected traffic volumes. However, due to the limited turning volumes and projected capacity operating at acceptable levels, a northbound right-turn lane is not recommended as part of this study.

<sup>&</sup>lt;sup>4</sup> Transportation Research Board (TRB). <u>Evaluating Intersection Improvements: An Engineering Study Guide</u>. Washington, DC: 2001

As shown in Table 27 and the corresponding graphs, it was determined that one (1) shared lane for left-turning and right-turning movements is sufficient along Site Access 3 at its intersection with Thompson's Station Road during the peak hour periods with projected traffic volumes.

#### **Traffic Signal Warrants - Projected**

The *TDOT Traffic Design Manual* subsection <u>3.2.4A – Application of Signal Warrants</u> states "In investigation of warrants toward signal justification, Warrant 1 (Eight Hour Vehicular Volume) or Warrant 7 (Crash Experience) will be the primary warrants considered for signal approval." Therefore, this study assumed that a traffic signal would not be warranted unless one (1) of the three (3) Eight Hour Vehicular Volume Warrants was met (Warrants 1A, 1B, and 1C).

Traffic volume related signal warrants were performed based on projected traffic volumes and 70 percent minimum vehicular volumes provided in Section 4C of the Manual on Uniform Traffic Control Device (MUTCD) and as shown in Appendix D. As directed within the MUTCD, traffic volumes within the 70 percent columns were used due to the statutory speed limit exceeding 40 MPH. The results of the signal analyses are provided in the table below. It should be noted that the midday hours between 9:00 AM – 2:00 PM were interpolated and are considered to be a conservative estimate.

## **Conclusions and Recommendations**

#### **Existing Conditions**

The westbound approach to the intersection of Columbia Pike and Station South Drive currently operates at LOS E during the PM peak hour. All other critical movements to the study intersections surrounding the proposed development currently operate at a minimum of LOS D during the AM and PM peak hours with existing traffic volumes.

It was determined that the southbound approach of Columbia Pike at its intersection with Station South Drive presently warrants one (1) exclusive lane for left-turning movements with existing traffic volumes. It is important to note that this improvement is necessary regardless of the proposed Thompson's Station Road Subdivision Development and should not be the responsibility of the development.

It was determined that the westbound approach of Thompson's Station Road at its intersection with Clayton Arnold Road presently warrants one (1) exclusive lane for right-turning movements with existing traffic volumes. It is important to note that this improvement is necessary regardless of the proposed Thompson's Station Road Subdivision Development and should not be the responsibility of the development.

The installation of the southbound left-turn lane along Columbia Pike at its intersection with Station South Drive will reflect a positive impact on the frequency and number of rear-end related crashes for vehicles traveling southbound on Columbia Pike. With vehicles utilizing the southbound left-turn lane at this intersection, vehicles traveling in the though lane can progress through the intersection without being impeded by left-turning vehicles. Thus, improving the safety and overall operation of the intersection. The installation of a westbound right-turn lane along Thompson's Station Road at its intersection with Clayton Arnold Road will reflect a positive impact on the frequency of angle and rear-end related crashes for vehicles traveling westbound on Thompson's Station Road. This right-turn lane will allow vehicles traveling westbound in the through lane to progress through the intersection without being improvement is necessary regardless of the proposed Thompson's Station Road Subdivision Development and should not be the responsibility of the development as they are warranted based on existing deficiencies.

#### **Background Conditions**

The southbound through/right-turn movements to the intersection of Thompson's Station Road and Columbia Pike will operate at LOS F during the PM peak hour with the addition of the background traffic volumes. Even though these movements will operate at an unacceptable LOS, the overall intersection will operate at LOS D during the PM peak hour, which is acceptable. The westbound approach to the intersection of Columbia Pike and Station South Drive will continue to operate at LOS E during the PM peak hour with the addition of background traffic volumes. All other critical movements to the study intersections surrounding the proposed development will continue to operate at a minimum of LOS D during the AM and PM peak hours with the addition of background traffic volumes.

#### Projected Conditions

The southbound through/right-turn movements at the intersection of Thompson's Station Road and Columbia Pike will operate at LOS F during the PM peak hour with the addition of projected traffic volumes. The eastbound through/right-turn movements at the intersection of Thompson's Station Road and Columbia Pike will operate at LOS E during the AM and PM peak hours with the addition of projected traffic volumes. The westbound through/right-turn movements at the intersection of Thompson's Station Road and Columbia Pike will operate at LOS E during the AM peak hour with the addition of projected traffic volumes. Even though these movements will operate at an unacceptable LOS, the overall intersection will operate at LOS C and LOS D during the AM and PM peak hours, respectively, which is acceptable. The westbound approach to the intersection of Columbia Pike and Station South Drive will operate at LOS E and LOS F during the AM and PM peak hours, respectively, with the addition of projected traffic volumes. The westbound approach to the intersection of Columbia Pike and Site Access 1 will operate at LOS F during the AM and PM peak hours with the addition of projected traffic volumes. All other critical movements to the study intersections surrounding the proposed development will continue to operate at a minimum of LOS D during the AM and PM peak hours with the addition of projected traffic volumes.

It was determined that the northbound approach of Columbia Pike at its intersection with Station South Drive will warrant one (1) exclusive lane for right-turning movements with projected traffic volumes. However, due to the limited turning volumes and projected capacity operating at acceptable levels, a northbound right-turn lane is not recommended as part of this study.

It was determined that the southbound approach of Columbia Pike at its intersection with the proposed Site Access 1 will warrant one (1) exclusive lane for left-turning movements with projected traffic volumes. Furthermore, it was determined that the northbound approach of Columbia Pike at its intersection with the proposed Site Access 1 will warrant one (1) exclusive lane for right-turning movements with projected traffic volumes.

It was determined that one (1) shared lane for left-turning and right-turning movements is sufficient along the westbound approach of the proposed Site Access 1 at its intersection with Columbia Pike with projected traffic volumes. Furthermore, it was determined that one (1) shared lane for left-turning and right-turning movements is sufficient along the northbound approach of the proposed Site Access 2 at its intersection with Columbia Pike with projected traffic volumes.

Based on the analyses within this study, and a review of the proposed development's access plan, the recommendations below (and on Figure 10) are presented to be implemented as part of the proposed Thompson's Station Road Subdivision in Thompson's Station, TN:

#### Improvement Recommendations for the Thompson's Station Road Subdivision

- Construct the proposed Site Access 1 with one (1) inbound lane and one (1) outbound lane operating under a stop condition according to MUTCD, AASHTO, and TDOT standards; The outbound lane will be a shared lane for left-turning and right-turning movements;
- Construct the proposed Site Access 2 with one (1) inbound lane and one (1) outbound lane operating under a stop condition according to MUTCD, AASHTO, and TDOT standards; The outbound lane will be a shared lane for left-turning and right-turning movements;
- Construct the proposed Site Access 3 with one (1) inbound lane and one (1) outbound lane operating under a stop condition according to MUTCD, AASHTO, and TDOT standards; The outbound lane will be a shared lane for left-turning and right-turning movements;
- Construct one (1) exclusive left-turn lane on the southbound approach of Columbia Pike at its intersection with the proposed Site Access 1. The left-turn lane shall provide 50 feet of storage and taper lengths according to MUTCD, AASHTO, and TDOT standards;
- Construct one (1) exclusive right-turn lane on the northbound approach of Columbia Pike at its intersection with the proposed Site Access 1. The right-turn lane shall provide 50 feet of storage and taper lengths according to MUTCD, AASHTO, and TDOT standards;
- A signal timing study should be performed at the intersection of Columbia Pike and Thompson's Station Road and all timings should be optimized to accommodate projected traffic volumes.
- All radii for the proposed access shall be designed to accommodate the largest turning requirements of either an SU-30 truck (garbage) or an emergency vehicle (fire apparatus) that will service the development according to MUTCD, AASHTO, and TDOT standards;
- Ensure the departure sight distance triangles for all driveways, internal intersections, and site access intersections are designed to be clear of all sight obstructions (including grade) as specified by AASHTO. The design of proposed internal roadway system should be completed according to the MUTCD, AASHTO, and TDOT standards;

## **Projected Capacity Analyses with Improvements**

To evaluate impact of the proposed improvements on the projected traffic operations at the study intersections within the vicinity of the project site, AM and PM peak hour capacity analyses were performed with projected traffic volumes. Levels-of-service (LOS), corresponding average delays, and 95<sup>th</sup> percentile queues were calculated for each turning movement. The study intersections were analyzed under projected conditions with the proposed recommendations outlined in the Conclusions and Recommendations portion of this study. Appendix C contains the detailed capacity analyses results. For this analysis, optimized traffic signal timings were used at the intersection of Thompson's Station Road and Columbia Pike.

			2020 Projected Conditions (With Improvements)					nents)

#### Table 34. Projected (With Improvements) Capacity Analyses

As shown in Table 34, the southbound through/right-turn movements at the intersection of Thompson's Station Road and Columbia Pike will operate at LOS F during the PM peak hour with the addition of projected traffic volumes. The eastbound through/right-turn movements at the intersection of Thompson's Station Road and Columbia Pike will operate at LOS E during the AM and PM peak hours with the addition of projected traffic volumes. The westbound through/right-

turn movements at the intersection of Thompson's Station Road and Columbia Pike will operate at LOS E during the AM peak hour with the addition of projected traffic volumes. Even though these movements will operate at an unacceptable LOS, the overall intersection will operate at LOS C and LOS D during the AM and PM peak hours, respectively, which is acceptable. The westbound approach to the intersection of Columbia Pike and Station South Drive will operate at LOS E and LOS F during the AM and PM peak hours, respectively, with the addition of projected traffic volumes. The westbound approach to the intersection of Columbia Pike and Site Access 1 will operate at LOS F and LOS E during the AM and PM peak hours, respectively, with the addition of projected traffic volumes. All other critical movements to the study intersections surrounding the proposed development will continue to operate at a minimum of LOS D during the AM and PM peak hours with the addition of projected traffic volumes and the implementation of the proposed improvements. Appendix C contains the detailed capacity analyses results.

1550 Thompson's Station Road W. P.O. Box 100 Thompson's Station, TN 37179

#### MEMO

DATE: July 17, 2018

TO: Planning Commission

FROM: Wendy Deats, Town Planner

SUBJECT: The Fields of Canterbury Preliminary Plat – Phases 14 - 17 for the creation of 72 single family lots, 85 townhome lots, a pump station lot and four (4) open space lots and the removal of 96 trees totaling 2,239 inches of trees.

# Background

On June 26, 2018, the Planning Commission evaluated the request for a preliminary plat to create phases 14 - 17 within the Fields of Canterbury neighborhood. Due to the concerns regarding the impacts to Critz Lane which is currently in design for improvements, the Commission deferred the request to schedule a work session to discuss the traffic improvements with the Town's traffic engineers.

On July 10, 2018, the Planning Commission held a work session to discuss improvements the project, the traffic study and the improvements in process for Critz Lane. The Town's traffic consultant explained the proposed improvements to Critz will increase capacity at the intersections and improve the safety of the roadway. Concerns over the opening of the new school and the impact to the intersection at Clayton Arnold and Critz will be prior to the construction of the improvements. The developer proposed the idea of working with the town on a public-private partnership for the construction of Critz Lane along the project frontage.

The Planning Commission also expressed concern regarding the request to waive the tree replacement requirements. However, the developer stated that his intentions are to amend his project to eliminate the request for a deviation from the replacement requirements.

# **Recommendation**

With the recommended contingencies, the preliminary plat will comply with the Land Development Ordinance, therefore, Staff recommends Planning Commission approval with the contingencies:

- 1. Prior to the approval of construction plans, the developer shall enter into a development agreement for the project.
- 2. Prior to the approval of construction plans, the developer shall obtain approval of an agreement with the Town for the construction of the improvements to Critz Lane along the project frontage, including the intersection of Clayton Arnold and Critz Lane.
- 3. Prior to the approval of construction plans, revise the traffic study to include the phasing and timing of signal operation and equipment be modified to provide a right turn overlap for the right turn westbound and left turn southbound.

- 4. Prior to the approval of construction plans, the landscaping plan shall be revised to incorporate all tree replacement as required by the ordinance.
- 5. Buffer type 3 (semi-opaque) shall be installed in between the project and the adjacent properties within the D1 zoning district.
- 6. Prior to the approval of construction plans, all applicable codes and regulations shall be addressed to the satisfaction of the Town Engineer. A drainage study shall be submitted to verify that drainage is managed adequately on site.
- 7. Street lights shall be incorporated into these phases to match the existing neighborhood and shall be documented on the construction drawings.
- 8. All construction traffic into these phases shall be required to use Lioncrest Lane.
- 9. During construction, the developer shall comply with all recommendations of the geotechnical report dated June 2, 2017.

June Planning Commission Staff Report

#### Thompson's Station Planning Commission Staff Report – Item 1 (PP 2018-003) June 26, 2018

The Fields of Canterbury Preliminary Plat – Phases 14 - 17 for the creation of 72 single family lots, 85 townhome lots, a pump station lot and four (4) open space lots and the removal of 96 trees totaling 2,239 inches of trees.

#### **PROJECT DESCRIPTION**

Ragan Smith & Associates, on behalf of Encompass Land Group submitted a request for a preliminary plat to establish four phases which will include 72 single family lots, 85 townhome lots, a pump station lot, open space lots and the removal of 96 trees.

# ANALYSIS

#### Land Use/Density

The development is located within the D3 – High Intensity zoning district which permits three units an acre and permits housing options that include single-family and townhomes. This plat is a 53.85-acre expansion of The Fields of Canterbury. The original development was 270.5 acres and was approved for 204 townhomes and 612 single-family dwellings for a total of 816 residential units. These phases will add 72 single family and 85 townhomes for a total of 684 single family and 289 townhomes on 324.35 acres for a density of three units an acre.

#### Lot Width and Setbacks

The single family lots will vary in size from .17 acres to .28 acres with widths greater than 50 feet. The proposed setbacks are 20 feet for the front yard setback, 7.5 feet for the side yard setbacks and 20 feet for the rear yard setback. The townhome lots will have a front yard setback of 15 feet with a minimum of 20 feet for the driveway length and a rear yard setback of 20 feet. In addition, the townhomes will maintain a 15-foot setback in between buildings. Therefore, the preliminary plat conforms to lot widths and setback standards within Land Development Ordinance (LDO).

#### Roadways

The standard for local roadways is 50 feet. Bramblewood Lane will be extended from phase 13 into these phases. Nickleby Place, Nature Trail Walk and Lioncrest Lane are new roads that will be constructed as part of these phases. All roadways will have a 50 feet right-of-way with a five-foot-

wide landscape strip and a five-foot-wide sidewalk. Street lights are not shown on the plat, however, Staff recommends a contingency that street lights to match the neighborhood lights shall be installed within the landscape strip between the sidewalk and the roadway. Lioncrest, a new roadway will be constructed with a connection to Critz Lane. Critz Lane is currently in design for improvements and Staff is concerned that future road improvements may conflict with the elevation of Lioncrest. Therefore, Staff would recommend that the developer coordinate with the Town during the construction to ensure no conflicts occur between the construction of the proposed road the improvements to Critz Lane.

#### Critical Lots

No development will occur on slopes exceeding 25%; however, several lots contain slopes between 15 and 25% and are critical lots due to these slopes. Lots 1406-1408, 1414-1415, 1417, 1420, 1423-1425, 1429-1433, 1435, 1501-1502, 1506-1507, 1512, 1516-1523, 1526 and 1531 are designated as critical lots on the plat. A grading plan will be reviewed with the construction plans for the overall phase. Prior to the issuance of building permits, all critical lots require engineered site plans and site-specific grading plans to address any issues.

### **Open Space**

The original development plan was approved with a 25% requirement for open space, however new phases of the neighborhood are subject to the current code open space requirement which is 45%. The total open space within these phases is 25.64 acres or 47% of the project site. Therefore, the project is consistent with the LDO.

#### Trees

Development of phases 14 - 17 will result in the removal of 96 trees for a total of 2,239 inches. The LDO requires the replacement of trees 18 inches and greater at a ratio of one and a half inches for every inch removed. Therefore, 3,358.5 inches of trees are required to be replaced within the development. This standard is found within Section 3.3.14 Tree Protection in the Subdivision Regulations. The Planning Commission has the authority to grant a deviation is the Commission finds that "extraordinary hardships or practical difficulties may result from strict compliance with the subdivision regulations" and that the deviation from the standard doesn't have a negative impact on the "general intent and purpose of these regulations."

The developer has stated that "the design team exercised sensitivity to the existing trees with the product placement, as well as proposed grading and utilities" and is "incorporating retaining walls and multiple building foundation types (including basement, within specific areas) to minimize the impact on the existing trees" (See attached letter for full justification statement). A landscape plan was submitted and the developer proposes to install/plant 900 trees for a total of 2,000 inches of replacement trees and is requesting relief from the remaining 1,358.5 inches. The proposed trees will include two trees per lot, and the remaining trees within the open space area. This includes a buffer type 3 (semi opaque) between the neighboring properties zoned D1 and the neighborhood zoned D3 as required by the LDO.

The standards for tree replacement were considered and reduced/lessened during the adoption of the LDO. However, due to concerns over the reduced protection of trees, the LDO was amended to increase the requirements to the current standard. Therefore, in keeping with the intent of the LDO, Staff does not recommend the Planning Commission grant a deviation from the tree replacement standards.

# Construction Route

The construction route for these phases is proposed to be the new road connection to Critz Lane, Lioncrest Lane. This route will provide direct access to these phases of the project and will reduce the construction traffic on other roads within the subdivision.

### Traffic Study

A traffic study was submitted and reviewed by the Town's traffic engineer. All comments are addressed except the Town's traffic engineer does not recommend modifying the lane assignments at Critz Lane/Columbia Pike. The concern is that changing the lane assignments can cause the westbound right turn lane movement to be restricted by not permitting right turn movements during the red phase for westbound traffic. Based on their review of the signal timing and the anticipated peak hour volumes, the recommendation instead of lane assignment is that the phasing and timing of the signal operation and equipment be modified to provide a right turn overlap for the westbound right turn and southbound left turn. Staff recommends that this recommendation be added to the traffic study in place of lane assignments.

### **RECOMMENDATION**

With the recommended contingencies, the preliminary plat will comply with the Land Development Ordinance, therefore, Staff recommends Planning Commission approval with the contingencies:

- 1. Prior to the approval of construction plans, the developer shall enter into a development agreement for the project.
- 2. Prior to the approval of construction plans, revise the traffic study to include the phasing and timing of signal operation and equipment be modified to provide a right turn overlap for the right turn westbound and left turn southbound.
- 3. Prior to the approval of construction plans, the landscaping plan shall be revised to incorporate all tree replacement as required by the ordinance.
- 4. Buffer type 3 (semi-opaque) shall be installed in between the project and the adjacent properties within the D1 zoning district.
- 5. Prior to the approval of construction plans, all applicable codes and regulations shall be addressed to the satisfaction of the Town Engineer. A drainage study shall be submitted to verify that drainage is managed adequately on site.
- 6. Street lights shall be incorporated into these phases to match the existing neighborhood and shall be documented on the construction drawings.
- 7. All construction traffic into these phases shall be required to use Lioncrest Lane. The construction of Lioncrest shall be coordinated with the Town's improvements to Critz Lane.
- 8. During construction, the developer shall comply with all recommendations of the geotechnical report dated June 2, 2017.

MEMO

**DATE:** July 17, 2018

**TO:** Planning Commission

**FROM:** Wendy Deats, Town Planner

**SUBJECT:** Item 2 – Land Development Amendments (Zone Amend 2018-004)

On June 26, 2018, the Planning Commission heard a staff initiated request to incorporate additional standards related to road construction specifications, street lights, as built plans and traffic studies. Based on questions pertaining to the appropriate threshold to require a traffic study, the Commission deferred the item to the July meeting for further consideration.

# **PROPOSED REVISIONS**

# Section 3.9.23 Road Construction Specifications (page 66).

The road construction specifications in this Article shall be the minimum standards for construction of public or private improvements located within any subdivision within the jurisdictional area. These specifications shall apply to any person, developer, firm, business or other entity constructing public roadways within the Town. All plans shall be submitted for review and approval and shall be scaled drawings with specifications and shall include all aspects of the street, grading and drainage, including all supplemental documentation verifying engineering calculations, erosion control, on street parking, street lighting and any other information related to the construction activities for the project. The construction plans shall be prepared and stamped by a registered engineer in the State of Tennessee. Prior to any approvals, all necessary state approvals, including but not limited to, the Tennessee Department of Transportation, Tennessee Department of Environment and Conservation and the Tennessee Division of Water Pollution shall be submitted to the Town in writing.

Roadway Construction

- a. Typical cross sections and dimensions of standard local and collector streets are illustrated in Appendix E.
- b. Construction materials and methods including aggregate base stone, asphalt, concrete and roadway subgrades shall be fully tested and constructed in accordance with the designations and requirements within the TDOT Standard Specifications.
- c. Drainage facilities including but not limited to ditches, swales, detention/retention ponds, culverts or other structures shall be inspected, tested, and written documentation shall be submitted for approval by the Town prior to the next phase of construction.
- d. Subgrade and base stone shall be brought to grade with proper crown prior to compaction test being completed. Proof rolling with a tandem axle loaded dump truck (23 tons) shall be conducted by the contractor and witnessed by Town Staff and testing agency personnel.
- e. Proof roll shall be redone if the project is rained on prior to the binder surface installation.
- f. Density test shall be conducted by a local testing agency approved by town staff and licensed by the state of Tennessee and shall be at the expense of the developer. A minimum of one density test per lift for each five-hundred (500) feet of roadway shall be required.

1550 Thompson's Station Road W. P.O. Box 100 Thompson's Station, TN 37179

- g. Binder course and surface course shall be inspected and tested per TDOT specifications and written documentation shall be submitted for approval by the Town prior to the next phase of construction.
- h. Any materials or workmanship that does not meet the requirements of the approved plans or specifications shall be brought into compliance with all approvals. A stop work order may be given if substandard materials or workmanship is not corrected. No reduction of sureties will be considered if defective materials or workmanship occurs within the development.
- i. The developer shall provide the necessary labor and supervision to support field testing by a third party at no cost to the Town. The design engineer or a certified quality control inspector shall be present during construction activities. Weekly test reports shall be submitted in writing and reviewed by the Town throughout the duration of the work. Defects in the workmanship shall be corrected at no cost to the Town. A detailed letter from the testing agency shall be provided attesting that all roadway improvements have been constructed in accordance with the plans and specifications prior to the release of performance surety. The letter shall contain the seal of the Engineer and be in report form, including all weekly project activity and the associated testing results.
- j. No asphalt binder shall be installed unless temperature is at least 40 degrees Fahrenheit and rising unless otherwise approved by the Town Engineer.
- k. All projects shall be subject to inspection during and upon completion of construction activities by authorized Town staff representatives. A Town inspector on-site does not eliminate the requirement for a third-party inspector and a written report to the Town. Upon completion of the project, the project engineer shall submit in writing to the Town that the construction of all infrastructure was completed in compliance with approved plans and a representative from the Town will make a final inspection to determine the acceptability of the work.
- Street Lights

Street lights shall be required for all new subdivisions within the Transect Community, D1, D2 and D3 zoning districts. Street lighting should be pedestrian scaled and shall be decorative in a manner to match the character of the neighborhood. Cobra head and shoebox light heads are not permitted within a residential subdivision. Street lighting should provide adequate lighting to enhance walkway safety. Street lights within neighborhoods shall not exceed 15 feet in height. Street lights shall be installed between the curb and the sidewalk within the grass strip. Streetlights should have a maximum distance of 300 feet apart and shall be approved by Middle Tennessee Electric Membership Corporation. The developer subdivider shall bear the financial responsibility for the original installation costs for the materials and labor for street lighting where it is deemed reasonably necessary by the Town Engineer. Street lighting shall be of such size and specification as deemed appropriate by the Town Engineer to meet the specific requirements of the subdivision. - Street lights shall be installed between the curb and the sidewalk within the grass strip.

# As built plans

As built plans shall be submitted to the Town upon completion of construction activities. As built plans shall be submitted with the completion of each phase of the development. The as built plans shall include all pertinent information related to the phase, including but not limited to, property lines, all cables, utilities, drainage structure, pump stations, etc., detention/retention

1550 Thompson's Station Road W. P.O. Box 100 Thompson's Station, TN 37179

### ponds, any existing structures.

Add the following section to provide additional clarity and guidance in the preparation of traffic studies and analysis.

# 3.9.24 Traffic Study

- a. A traffic study shall be required for any development that will create 750 trips per day or 100 trips or more during a peak hour or any development located on a major arterial within the Town or a project site located in proximity to a road condition that requires further analysis prior to additional volume in the vicinity.
- b. Traffic studies shall be prepared by a licensed traffic engineer using the standard format as outlined by the Institute of Transportation Engineers. The applicant shall meet with the Town staff prior to initiating the traffic study to review/determine the scope of study. The completed traffic study shall be submitted to the Town for review. Review shall consist of a third-party review and all cost associated with the Town's third-party review shall be the responsibility of the developer/applicant. Traffic studies older than one year shall be updated.
- c. Any project that does not require a traffic study may be required to submit a traffic analysis for access, trip generation, existing conditions and proposed changes to the existing conditions.

# **RECOMMENDATION**

Staff is requesting the Planning Commission adopt these standards in Article 3 of the Land Development Ordinance.

Appendix F Street Lamp Detail

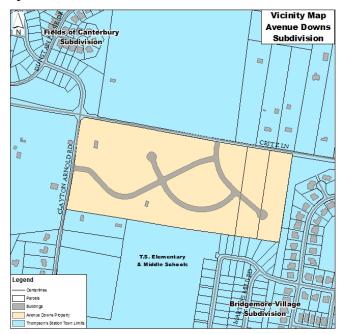

#### Thompson's Station Planning Commission Staff Report – Item 3 (PP 2018-004) July 24, 2018

# Avenue Downs Preliminary Plat for the creation of 69 single family lots, five open space lots, a pump station lot and the removal of 18 trees totaling 455 inches of trees.

#### **PROJECT DESCRIPTION**

Ragan Smith & Associates, on behalf of Amber Lane Development, submitted a request for a preliminary plat for a two-phase project which will include 69 single family lots, a pump station lot and open space lots. The plat also includes the removal of 18 trees for a total of 455 inches.

#### **ANALYSIS**

#### Land Use/Density

The development is located within the D2 – Medium Intensity zoning district which permits one and a half units an acre and permits housing options that include single-family. This project includes 69 single family lots on 46.4 acres for a density of one and a half units per acre.

#### Lot Width and Setbacks

The single family lots will vary in size from .21 acres to .40 acres with lot widths greater than 65 feet. The proposed setbacks are 20 feet for the front and rear yard setbacks and 10 feet for the side yard setback. Therefore, the lot widths and setbacks comply with Land Development Ordinance (LDO).

#### Roadways

The standard for local roadways is 50 feet. Three new roads are proposed and will have a 50-foot right-of-way. A street section is not provided, however, a five-foot sidewalk and a five-foot landscape strip between the sidewalk and the road is required. Road A will connect to Clayton Arnold Road, Road B is an internal roadway and Road C will connect to Critz Lane. Street lights are not shown on the plat; however, Staff recommends street lights be required and installed within the landscape strip between the sidewalk and the roadway. Critz Lane is currently in design for improvements and there is a slight elevation change at the connection of Road C. Therefore, Staff

would recommend that the developer coordinate with the Town during the construction to ensure no conflicts occur between the construction of the proposed road and the improvements to Critz Lane. The applicant is working on an agreement with Encompass Land Group and the Town for Critz Lane improvements. Therefore, Staff would recommend a contingency related to the execution of such agreement prior to any approvals.

Names of all new public ways as approved are required at the preliminary plat phase. No approvals were submitted with this plat application. Therefore, Staff would recommend a contingency that all road names be approved by Williamson County and submitted to the Town.

#### **Open Space/Amenities**

The minimum open space requirement is 45%. Five open space lots are proposed for a total of approximately 25 acres or 54% of the project site. Therefore, the project complies with the LDO.

The LDO requires that neighborhoods with greater than 50 lots shall incorporate one of the following amenities: children's playground, swimming pool with amenities center, passive recreation areas, and trails throughout the open space where feasible. No amenity is shown on the plat, however the trail as shown on the concept plan will be incorporated into the overall landscape plan. The project site has frontage along Clayton Arnold and a portion of the trail should run along Clayton Arnold to provide a link to what will ultimately connect the Town's sidewalks and trails. Therefore, Staff would recommend a contingency that the trail have an alignment that includes the Clayton Arnold frontage. Staff has discussed this with the development team and they are agreeable to incorporate the trail along the Clayton Arnold frontage.

#### Trees

Development of site, as proposed, will result in the removal of 18 trees for a total of 455 inches. The LDO requires the replacement of trees 18 inches and greater at a ratio of one and a half inches for every inch removed. Therefore, 682.5 inches of trees are required to be replaced within the development. A landscape plan was submitted and the developer proposes to install/plant 342 trees for a total of 684 inches of replacement trees. The proposed trees will include street trees along the proposed roads with the remaining trees within the open space area. This includes a buffer type 2 (broken screen) between the neighboring properties zoned D1 and the neighborhood zoned D2 as required by the LDO. The LDO also requires that one two-inch caliper tree be planted on each lot (Section 4.10.1) which will be required during review of individual building permits.

#### Traffic Study

A traffic study was submitted and reviewed by the Town's traffic engineer. Comments were sent to the developer's traffic engineer and no response has been received. However, at a work session held on July 10, 2018, the developer in conjunction with the Town and the developer for the Fields of Canterbury to discuss a possible agreement with the Town for improvements to Critz Lane. Therefore, Staff would recommend that prior to the approval of any construction drawings, the developer obtain approval of an agreement related to the roadway improvements.

#### Utilities

The developer requested approval of wastewater from the Board of Mayor and Aldermen on June 12, 2018. The request was not approved; therefore, the project does not have sewer availability. The LDO states "land shall not be subdivided until proper provisions have been made for drainage, water, sewerage, telecommunications and other public utilities . . ." (Section 3.1.1). Therefore, Staff cannot recommend approval of a project that does not have access to sewer. However, the

developer is working on an agreement with the Town which may resolve issues related to sewer availability. Therefore, Staff recommends deferral of this plat to provide additional time for the developer to work with the Town.

### **RECOMMENDATION**

Based on the lack of utilities, specifically sewer, Staff recommends deferral of the preliminary plat to the August Planning Commission meeting.

### <u>ATTACHMENTS</u>

Preliminary Plat Landscape Plan Traffic Study Traffic Memo

GENERAL NOTES

- 1. THE PURPOSE OF THIS PLAT IS TO CREATE 69 SINGLE FAMILY LOTS, A PUMP STATION LOT, OPEN SPACE TRACTS, AND PUBLIC RIGHT OF WAY.
- 2. BEARINGS SHOWN HEREON ARE BASED ON THE TENNESSEE STATE PLANE COORDINATE SYSTEM NAD 1983). GPS EQUIPMENT WAS USED TO DETERMINE THE POSITION OF TWO CONTROL POINTS ON THE SURVEYED PROPERTY IN ORDER TO ESTABLISH THE BEARING BASE FOR THE SURVEY. TYPE EQUIPMENT USED: LEICA, MODEL GX1230, DUAL FREQUENCY RECEIVER. THE TYPE OF GPS SURVEY: NETWORK ADJUSTED REAL TIME KINEMATIC. THE RELATIVE POSITIONAL ACCURACY IS 0.05'.
- 3. THE PROPERTY IS ZONED D2 (MEDIUM DENSITY RESIDENTIAL). MAXIMUM LOT COVERAGE (SINGLE FAMILY) - 55%. MINIMUM BUILDING SÈTBACKS:

FRONT - 20 SIDE - 10' REAR - 20'

- 4. BY SCALED MAP LOCATION AND GRAPHIC PLOTTING ONLY, THIS PROPERTY LIES WITHIN FLOOD ZONES "X" (OTHER FLOOD AREAS) AND "X" (OTHER AREAS), AS DESIGNATED ON CURRENT FEDERAL EMERGENCY MANAGEMENT AGENCY MAP NOS. 47187C0345F AND 47187C0365F WITH AN EFFECTIVE DATE OF SEPTEMBER 29, 2006, WHICH MAKES UP A PART OF THE NATIONAL FLOOD INSURANCE ADMINISTRATION REPORT; COMMUNITY NO. 470424, PANEL NOS. 0345 AND 0365, SUFFIX F, WHICH IS THE CURRENT FLOOD INSURANCE RATE MAP FOR THE COMMUNITY IN WHICH SAID PREMISES IS SITUATED. SAID MAP DEFINES ZONE "AE" UNDER "SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD" AS BASE FLOOD ELEVATIONS DETERMINED. SAID MAP DEFINES ZONE "X" (OTHER FLOOD AREAS) UNDER "OTHER FLOOD AREAS" AS AREAS OF 0.2% ANNUAL CHANCE FLOOD; AREAS OF 1% ANNUAL CHANCE FLOOD WITH AVERAGE DEPTHS OF LESS THAN 1 FOOT OR WITH DRAINAGE AREAS LESS THAN 1 SQUARE MILE; AND AREAS PROTECTED BY LEVEES FROM 1% ANNUAL CHANCE FLOOD. SAID MAP DEFINES ZONE "X" (OTHER AREAS) UNDER "OTHER AREAS" AS AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN.
- 5. THIS SURVEYOR HAS NOT PHYSICALLY LOCATED THE UNDERGROUND UTILITIES. ABOVE GRADE AND UNDERGROUND UTILITIES SHOWN WERE TAKEN FROM VISIBLE APPURTENANCES, PUBLIC RECORDS, AND/OR MAPS PREPARED BY OTHERS. THE SURVEYOR MAKES NO GUARANTEE THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE OR ABANDONED. THE SURVEYOR FURTHER DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED. THEREFORE, RELIANCE UPON THE TYPE, SIZE AND LOCATION OF UTILITIES SHOWN SHOULD BE DONE SO WITH THIS CIRCUMSTANCE CONSIDERED. DETAILED VERIFICATION OF EXISTENCE, LOCATION AND DEPTH SHOULD ALSO BE MADE PRIOR TO ANY DECISION RELATIVE THERETO IS MADE. AVAILABILITY AND COST OF SERVICE SHOULD BE CONFIRMED WITH THE APPROPRIATE UTILITY COMPANY. IN TENNESSEE, IT IS A REQUIREMENT, PER "THE UNDERGROUND UTILITY DAMAGE PREVENTION ACT", THAT ANYONE WHO ENGAGES IN EXCAVATION MUST NOTIFY ALL KNOWN UNDERGROUND UTILITY OWNERS NO LESS THAN THREE (3) NOR MORE THAN TEN (10) WORKING DAYS PRIOR TO THE DATE OF THEIR INTENT TO EXCAVATE AND ALSO TO AVOID ANY POSSIBLE HAZARD OR CONFLICT. TENNESSEE ONE CALL, DIAL 811.
- 6. SANITARY SEWER LINES AND STORM LINES SHOWN HEREON WERE TAKEN FROM A PRELIMINARY DESIGN. FINAL PLACEMENT OF UTILITIES WILL BE DEPICTED ON THE FINAL PLAT.
- 7. DOMESTIC WATER SUPPLY INFORMATION SHOWN HEREON IS BASED ON A PRELIMINARY DESIGN.
- 8. ALL PUBLIC STREETS AND DRAINAGE STRUCTURES WITHIN THE RIGHTS-OF-WAY WILL BE MAINTAINED BY THE TOWN OF THOMPSON'S STATION.
- HOMEOWNER'S ASSOCIATION WILL BE RESPONSIBLE FOR LONG TERM OPERATION AND MAINTENANCE OF STORMWATER INFRASTRUCTURE LOCATED IN DRAINAGE EASEMENTS AND ALL OPEN SPACE, INCLUDING LANDSCAPE AND DETENTION/RETENTION AREAS.
- 10. ELEVATIONS SHOWN HEREON ARE BASED ON NAVD 88. CONTOURS ARE AT TWO FOOT INTERVALS AND ARE BASED ON A FIELD RUN SURVEY USING RANDOM SPOT ELEVATIONS. CONTOURS WERE DERIVED USING SURFACE MODELING TECHNIQUES.
- 11. LOTS SHOWN THUS (★) ARE DESIGNATED AS CRITICAL LOTS AND HAVE NATURAL SLOPES IN EXCESS OF 15%. PER SECTION 3-102.104 OF THE SUBDIVISION REGULATIONS, PRIOR TO THE ISSUANCE OF A BUILDING PERMIT, A SITE GRADING PLAN FOR DEVELOPMENT OF THE LOT SHALL BE SUBMITTED ADDRESSING SITE SPECIFIC NATURAL RESOURCE ISSUES TO THE TOWN OF THOMPSON'S STATION FOR REVIEW AND APPROVAL. NO BUILDING PERMIT WILL BE ISSUED ON SAID LOTS UNTIL AND UNLESS THE TOWN ENGINEER HAS RECEIVED AND APPROVED THE SITE PLAN.
- 12. I HEREBY STATE THAT THIS SURVEY WAS DONE IN COMPLIANCE WITH THE CURRENT TENNESSEE MINIMUM STANDARDS OF PRACTICE AND THIS IS A CATEGORY I SURVEY AND THE RATIO OF PRECISION OF THE UNADJUSTED SURVEY IS 1:15,715.

DATE: <u>JUNE 15, 2018</u>

BY\_\_\_\_ . DARNALL, TN RLS #1571

13. ALL OPEN SPACE IS A PUBLIC UTILITY AND DRAINAGE EASEMENT.

Know what's below. Call before you dig.

### **PLANTING NOTES**

- 1. ANY SERIES OF TREES TO BE PLACED IN A PARTICULAR ARRANGEMENT WILL BE FIELD CHECKED FOR ACCURACY. ANY PLANTS MISARRANGED WILL BE RELOCATED.
- 2. SOIL USED IN BACKFILLING PLANTING PITS SHALL BE TOPSOIL AND MIXED WITH 25% PEAT BY VOLUME. EXCEPT FOR ERICACEOUS PLANTS, VERY ACID OR SOUR SOIL (SOIL HAVING A pH less than 6) SHALL BE MIXED WITH SUFFICIENT LIME TO PRODUCE A SLIGHTLY ACID REACTION (A pH of 6.0 to 6.5). ADD 10-10-10 COMMERCIAL FERTILIZER AT THE RATE OF 2 POUNDS PER CUBIC YARD. MIX BOTH FERTILIZER AND PEAT THOROUGHLY BY HAND OR ROTARY TILLER.
- 3. SOIL USED IN BACKFILLING ERICACEOUS PLANTS SHALL BE TOPSOIL MIXED WITH 50% PEAT BY VOLUME. ADD 5-10-5 COMMERCIAL FERTILIZER AT THE RATE OF 5 POUNDS PER CUBIC YARD. MIX BOTH FERTILIZER AND PEAT THOROUGHLY BY HAND OR ROTARY TILLER.
- 4. UPON SECURING PLANT MATERIAL AND BEFORE INSTALLATION, THE CONTRACTOR SHALL NOTIFY THE LANDSCAPE ARCHITECT OR OWNER'S REPRESENTATIVE FOR A PRE-INSTALLATION INSPECTION TO VERIFY ALL PLANT MATERIAL MEETS SPECIFICATION. MATCH TREES OF SAME SPECIES IN GROWTH CHARACTER AND UNIFORMITY.
- 5. APPLY HERBICIDE (TREFLAN OR EQUIVALENT) TO ALL PLANT BEDS PRIOR TO PLANTING FOR NOXIOUS WEED CONTROL AT A RATE OF 2 POUNDS PER 1,000 SQUARE FEET.
- 6. CONTRACTOR SHALL SUBMIT A 10 OUNCE SAMPLE OF THE TOPSOIL PROPOSED TO A TESTING LABORATORY FOR ANALYSIS. SUBMIT TEST RESULTS WITH RECOMMENDATIONS FOR SUITABILITY TO THE OWNER'S REPRESENTATIVE FOR APPROVAL. 7. PLANTS SHALL BE ORIENTED FOR BEST APPEARANCE AND VERTICAL. ALL
- NON-BIODEGRADABLE ROOT CONTAINERS SHALL BE REMOVED. 8. SELECTIVELY TRIM TREE BRANCHES BY 25%, MAINTAINING NATURAL SHAPE. PRUNE ALL DEAD AND BROKEN BRANCHES IN TREES AND SHRUBS. REMOVE
- TAGS, TWINE OR OTHER NON-BIODEGRADABLE MATERIAL 9. SCARIFY SUBSOIL IN PLANTING BEDS TO A DEPTH OF 3 INCHES. ALL PLANTING BEDS SHALL RECEIVE A MINIMUM OF 6 INCHES OF TOPSOIL 10.CONTRACTOR SHALL PROVIDE SMOOTH, NEATLY TRENCHED (3 INCH DEEP)
- BED EDGES. 11.ALL PLANTING BEDS TO HAVE A MINIMUM 4 INCH DEEP PINE BARK
- MULCH, PINE STRAW MULCH OR OTHER MULCH AS SPECIFIED. 12.DIMENSIONS FOR TRUNK CALIPER, HEIGHTS, AND SPREAD SPECIFIED ON THE MATERIAL SCHEDULE ARE A GENERAL GUIDE FOR THE MINIMUM REQUIRED SIZE OF EACH PLANT. QUALITY AND SIZE OF PLANTS, SPREAD OF ROOTS AND SIZE OF BALLS SHALL BE IN ACCORDANCE WITH A.N.S.I. Z80 "AMERICAN STANDARD FOR NURSERY STOCK" (CURRENT EDITION) AS PUBLISHED BY THE AMERICAN ASSOCIATION OF NURSERYMEN, INC
- 13.THE QUANTITIES INDICATED ON THE MATERIAL SCHEDULE ARE PROVIDED FOR THE BENEFIT OF THE CONTRACTOR, BUT SHOULD NOT BE ASSUMED TO ALWAYS BE CORRECT. IN THE EVENT OF A DISCREPANCY, THE PLANTING PLAN (PLANT SYMBOLS) WILL TAKE PRECEDENCE OVER THE MATERIAL SCHEDULE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR HIS/HER OWN QUANTITY CALCULATIONS AND THE LIABILITY PERTAINING TO THOSE QUANTITIES AND ANY RELATED CONTRACT DOCUMENTS AND/OR PRICE QUOTATIONS.
- 14.CONTRACTOR TO WARRANTY ALL MATERIAL FOR ONE YEAR AFTER DATE OF FINAL ACCEPTANCE.

### **SEEDING NOTES**

- 1. SEED ALL DISTURBED AREAS WITH KY-31 AT THE RATE OF 5 POUNDS PER 1,000 S.F. ALL SEED TO BE 98% PURE WITH 85% GERMINATION AND CONFORM TO ALL STATE REQUIREMENTS FOR GRASS SEED. THE FERTILIZER TO BE 6-12-12 COMMERCIAL TYPE WITH 50% OF ITS ELEMENTS DERIVED FROM ORGANIC SOURCES.
- 2. PLACE STRAW MULCH ON SEEDED AREAS. STRAW TO BE OATS OR WHEAT STRAW, FREE FROM WEEDS, FOREIGN MATTER DETRIMENTAL TO PLANT LIFE, AND DRY. HAY OR CHOPPED CORNSTALKS ARE NOT ACCEPTABLE.
- 3. THE CONTRACTOR SHALL VERIFY THAT THE PREPARED SOIL BASE IS READY TO RECEIVE WORK. CULTIVATE THE TOPSOIL TO A DEPTH OF 4 INCHES WITH A MECHANICAL TILLER AND SUBSEQUENTLY RAKE UNTIL SMOOTH. REMOVE FOREIGN MATERIALS COLLECTED DURING CULTIVATION AND RAKING OPERATIONS.
- 4. APPLY FERTILIZER ACCORDING TO THE MANUFACTURER'S RECOMMENDATIONS. LIMESTONE MAY BE APPLIED WITH THE FERTILIZER. APPLY FERTILIZER AFTER SMOOTH RAKING AND PRIOR TO ROLLER COMPACTION AND MIX THOROUGHLY IN THE UPPER 2 INCHES OF TOPSOIL.
- 5. APPLY SEED EVENLY IN TWO INTERSECTING DIRECTIONS AND RAKE IN LIGHTLY. WATER TOPSOIL LIGHTLY PRIOR TO APPLYING SEED. DO NOT SEED AREA IN EXCESS OF THAT WHICH CAN BE MULCHED ON THE SAME DAY
- 6. ROLL SEEDED AREA WITH ROLLER NOT EXCEEDING 112 POUNDS. 7. IMMEDIATELY FOLLOWING SEEDING AND COMPACTING, APPLY STRAW MULCH AT THE RATE OF ONE AND ONE HALF BALES PER 1.000 SQUARE FEET. IMMEDIATELY AFTER MULCHING, APPLY WATER WITH A FINE SPRAY AND SATURATE THE GROUND TO A DEPTH OF 4 INCHES.
- 8. CONTRACTOR IS RESPONSIBLE FOR WATERING SEEDED AREAS TO PREVENT GRASS AND SOIL FROM DRYING OUT UNTIL THE INSTALLATION IS INSPECTED AND ACCEPTED BY THE OWNER'S REPRESENTATIVE. 9. CONTRACTOR IS RESPONSIBLE FOR RESEEDING BARE SPOTS FOR A PERIOD
- OF ONE YEAR AFTER ACCEPTANCE OF INSTALLATION.

### **ROOT PRUNING NOTES**

- ROOT PRUNING SHALL BE PERFORMED ADJACENT TO ALL EXCAVATION NEXT TO THE CRITICAL ROOT ZONE TO A DEPTH OF 24 INCHES WITH A SHARP TRENCHER OR AN AIRSPADE. ROOTS 1.0 INCHES AND LESS IN DIAMETER SHOULD BE PRUNED WITH A SHARP BYPASS TYPE LOPPER. ROOTS GREATER THAN 1.0 INCH IN DIAMETER SHOULD BE PRUNE WITH A SHARP PRUNING SAW. THE TRENCH CREATED BY THE ROOT PRUNING SHALL BE BACKFILLED
- PREFORMED OR SUPERVISED BY AN ISA CERTIFIED ARBORIST ALL EQUIPMENT OPERATION, PARKING, SERVICING AND REFUELING SHOULD BE LOCATED AS FAR AWAY FROM THE CRITICAL ROOT ZONE OF PROTECTED TREES AS POSSIBLE. CEMENT TRUCK DISCHARGES AND RINSING SHOULD ALSO BE KEPT AT LEAST 50' AWAY FROM THE CRITICAL ROOT ZONE OF PROTECTED TREES
- REMOVAL OF VEGETATION WITHIN THE CRITICAL ROOT ZONE INSIDE TREE PROTECTION AREAS SHALL BE SUPERVISED BY AN ISA CERTIFIED ARBORIST
- 4. TREES IMPACTED BY CONSTRUCTION SHOULD BE GETTING A VOLUME OF WATER COMPARABLE TO 1 INCH OF RAINFALL PER WEEK DURING THE GROWING SEASON (MARCH TO NOVEMBER). IF THERE IS NOT ADEQUATE RAINFALL TO PROVIDE THIS VOLUME, THE ROOT ZONE SHOULD BE SOAKED EVERY 7 TO 10 DAYS TO MAKE UP THE DEFICIT. THIS CAN BE ACCOMPLISHED WITH A LAWN SPRINKLER AND PLASTIC RAIN GAUGE
- 5. SUPERVISION OF DEMOLITION OF EXISTING STRUCTURES OR REMOVAL OF TREES ADJACENT TO TREES SELECTED FOR PRESERVATION SHALL BE SUPERVISED BY AN ISA CERTIFIED ARBORIST

#### EXECUTIVE SUMMARY

#### INTRODUCTION

Avenue Downs is located on the southeast corner of Critz Lane and Clayton Arnold Road in the Town of Thompson's Station, Tennessee. When completed, Avenue Downs will consist of 69 single family homes. The purpose of this traffic impact study is to review the traffic impact of Avenue Downs.

#### BACKGROUND TRAFFIC

Based upon the proposed development schedule, the year 2021 will be used to analyze the impact of Avenue Downs.

To establish background traffic growth, TDOT historical traffic data was obtained in the project vicinity. Traffic growth due to outside developments and general population growth was based upon linear regression analysis of the historical traffic count data. Background traffic growth was established by increasing existing traffic by **2** percent annually for the period from 2017 to 2021. In addition to the annual growth rate, specific traffic growth estimates from three (3) underway, approved, or proposed developments were included in the determination of background traffic.

#### SITE TRAFFIC

The traffic impact of Avenue Downs is based upon a calculation of the number of vehicle trips that will enter and/or exit the site. The analysis periods of this report are the a.m. and p.m. peak hours of a typical weekday. Therefore, trips were generated according to the *Trip Generation Manual*, 10<sup>th</sup> Edition published by the Institute of Transportation Engineers (ITE). The total estimated trip generation for Avenue Downs is shown in the table below.

TOTAL TRIP GENERATION: AVENUE DOWNS								
	Total Units	Daily Trips	A.M. Peak Hour			P.M. Peak Hour		
Land Use			Enter	Exit	Total	Enter	Exit	Total
Single Family Homes	69 Units	739	14	40	54	45	26	71

#### TRAFFIC ANALYSIS

The following public intersections were analyzed for capacity deficiencies and improvement needs:

- Critz Lane at Clayton Arnold Road
- Clayton Arnold Road at Proposed Access

For these intersections, the following traffic scenarios were analyzed, where applicable:

- 2017 Existing Traffic
- 2021 Background Traffic
- 2021 Total Traffic that contains all traffic projected in the study area, including the completion of Avenue Downs

#### CONCLUSIONS AND RECOMMENDATIONS

#### Critz Lane at Clayton Arnold Road

- The Town of Thompson's Station's proposal to construct a roundabout at this intersection is appropriate based on the operational and safety advantages that a roundabout will have over two-way stop control at this location.
- The improvements proposed to be constructed as part of the Town of Thompson's Station's Critz Lane project will continue to be appropriate after development of Avenue Downs.

#### Clayton Arnold Road at Proposed Access

- The Proposed Access should consist of one lane in each direction with pavement widths in compliance with the appropriate roadway section shown in the Town's Land Development Ordinance.
- Proposed grading, landscaping, and development monumentation or signage should be designed so that AASHTO intersection sight distance is not obstructed for the proposed access.

#### I. INTRODUCTION

The purpose of this study is to review the traffic impact of the proposed Avenue Downs development in the Town of Thompson's Station, Tennessee. Avenue Downs will include 69 new residential units and one project access. This report has been requested by Town of Thompson's Station staff in order to address transportation impacts and to identify recommended mitigating measures as part of development plan review process.

In order to evaluate the traffic impact of Avenue Downs, an inventory of the existing transportation system was carried out along with an assessment of its adequacy. Based on the anticipated project schedule, a design year was established and system-wide growth rates as well as traffic growth due to specific developments in the area were applied to existing traffic volumes. Site traffic was generated, distributed and assigned to the roadway to quantify the impact of Avenue Downs. Transportation analyses were performed in order to assess any site or non-site related impacts on the system. Finally, recommendations for project access and mitigating measures related to Avenue Downs were offered.

#### II. <u>PROJECT DESCRIPTION</u>

#### A. Existing Development

As shown in Figure 1, Avenue Downs is located on the southeast corner of Critz Lane and Clayton Arnold Road in the Town of Thompson's Station, Tennessee. Avenue Downs Concept Plan includes a total area of 48.22 acres. The Avenue Downs proposal consists of 69 single family homes.

Figure 2 shows the concept plan for Avenue Downs.

#### B. Project Access

Access to Avenue Downs will be provided from one access to Clayton Arnold Road approximately 600 feet south of the intersection with Critz Lane.

#### C. Phasing and Timing

For the analysis of this report, the full build-out of Avenue Downs has been assumed to occur in the year 2021. The year 2021 is established as the horizon year for this study.

Site Development Notes

1. Stormwater management facilities will be located as shown on the plan. The locations are in the northwest and northeast corners of the site, adjacent to the southerly margin of Critz Lane. A detailed hydrologic analysis will be prepared during the design phase of the project to determine the extent of stormwater detention measures warranted for the project. Water quality measures will be implemented as per best management practices recognized by Thompson's Station. An estimate of the total impervious area generated by the development of the property was determined by taking the proposed acreage occupied by proposed roadways and single family lots and applying a runoff coefficient of 0.75 as follows:

27.2 acres (roadways/lots) x 0.75 = 20.4 acres impervious area

2. Water service to the project will be provided by the HB&TS Utility District via a connection to the existing I2" line in the easterly margin of Clayton Arnold Road. Existing HB&TS water system flows and pressures are assumed to adequately serve the proposed 69 single family lots. Design and subsequent approvals of the water system necessary to serve the project will be the responsibility of HB&TS.

Sanitary sewer service to the project will be provided by Thompson's Station. Aveune Downs will require an internal 8" gravity line collection system that will convey wastewater flows to two separate on site pump stations. The pump stations will be located at the northeast and northwest margins of the site, adjacent to the southerly margin of Critz Lane. The northeast pumping station will convey flows to an onsite gravity manhole and on to the northwest pumping station. A new force main will then convey flows to the northerly margin of Critz Lane via a bore and jack arrangement and on to the existing gravity manhole on the 10-inch line adjacent to the northerly margin of Critz Lane along the Canterbury project frontage. A detailed hydraulic analysis of the existing sewer system will be prepared during the design phase to determine the routing and discharge points of the new force main that results in the least amount of impact to the overall system.

3. Technical studies addressing endangered species, natural and cultural resources, traffic impacts and geotechnical considerations have been prepared as applicable and will be supplemented as necessary pending evaluation of the Concept Plan submittal by Thompson's Station.

4. A proposed phasing plan has been shown based upon the most logical and economical sequence of construction for the amended project.

#### III. EXISTING CONDITIONS

#### A. Transportation System

The existing transportation system in the area that provides access to Avenue Downs consists of collector and local roadways. The following roadways will comprise the study area for consideration of traffic mitigation measures at Avenue Downs.

- **Critz Lane** is listed as a collector roadway in the General Plan for Thompson's Station. Critz Lane is a two-lane roadway that connects Columbia Pike and Lewisburg Pike with a total length of approximately 2.6 miles. The posted speed limit on Critz Lane is 40 mph.
- **Clayton Arnold Road** is listed as a collector roadway in the General Plan for Thompson's Station. Clayton Arnold Road is a two-lane roadway that connects Critz Lane and Thompson's Station Road with a total length of approximately 1.3 miles. The posted speed limit on Clayton Arnold Road is 35 mph.

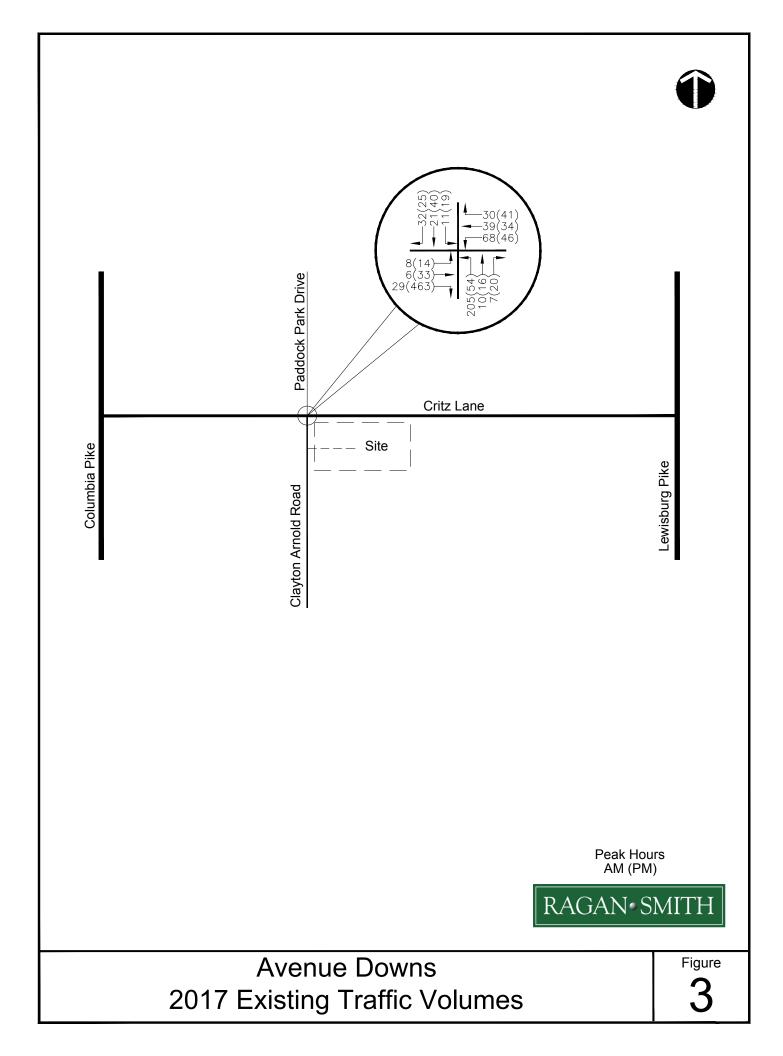

The Town of Thompson's Station is currently preparing a project to improve Critz Lane between Columbia Pike and Lewisburg Pike including widening Critz Lane to provide 11' travel lanes and 4' shoulders, constructing roundabout intersections at Clayton Arnold Road and Pantall Road, constructing turn lanes at other appropriate intersections, and correcting vertical alignment deficiencies. Survey work for this project was initiated in the fall of 2016 and a preliminary set of construction plans was provided by the Town in November 2017. The current construction schedule is not known for this project but previously the Town did anticipate bidding the project and awarding a contract in 2018. Based on the work that is underway and the previously available schedules for this project, it is anticipated that the Critz Lane improvements will be complete prior to the horizon year of this study.

#### B. Traffic Volumes

In order to assess the adequacy of the local transportation system, an evaluation of the current operational quality of intersections within the study area was required.

The peak hour of the adjacent street traffic was used to evaluate the traffic operations for Avenue Downs. In order to identify the peak periods for analysis, traffic counts were conducted in December 2017 at the intersection of Critz Lane at Clayton Arnold Road. The peak hours for analysis are 6:30 - 7:30 a.m. and 4:30 - 5:30 p.m.

Figure 3 shows the existing peak hour traffic volumes for the intersections in the study area.

#### IV. FORECASTED BACKGROUND TRAFFIC

#### A. Introduction

Before any impacts to the study area can be addressed, some estimate of background traffic volumes for the horizon year 2021 must be established. Background traffic volumes were established by segregating potential growth into two categories:

- Specific development traffic growth within the immediate study area
- Growth due to small scale development and/or general population growth

#### B. Specific Development Growth

Traffic growth from the three (3) specific developments described below was included in the background traffic forecasts for the analysis of this report.

- <u>The Fields at Canterbury</u> The existing approved portions of The Fields at Canterbury include approximately 90 single family homes and 54 townhomes that are not yet constructed or occupied. Site traffic from these units has been included in the background traffic growth forecast of this report.
- <u>Thompson's Station Elementary and Middle Schools</u> Williamson County Schools is currently constructing a new campus on Clayton Arnold Road south of Critz Lane that will include a new Elementary School and a new Middle School, each with a capacity of 800 students. While it is unlikely that both schools will have arrival or dismissal times coinciding with the peak hour of the adjacent streets, the analysis of this report conservatively applies trips for both schools to the peak hour analysis.
- <u>Proposed Additions to The Fields at Canterbury</u> The proposed additions to The Fields at Canterbury are proposed, but not yet approved, for east of the existing sections of The Fields at Canterbury. The proposed additions to The Fields at Canterbury will consist of 179 single family homes and 141 townhomes. Due to the proximity of The Fields at Canterbury to Avenue Downs, site traffic from the proposed additions has been included in the background traffic growth forecast of this report.

Trip generation for the specific background developments is shown in Table 1. The trip distribution for these background developments is shown in the appendix of this report.

TABLE 1								
TRIP GENERATION: BACKGROUND SPECIFIC DEVELOPMENTS								
Land Lice and Total Units	Daily	A.M	. Peak H	lour	P.M. Peak Hour			
Land Use and Total Units	Trips	Enter	Exit	Total	Enter	Exit	Total	
The Fields at Canterbury Approved but not Constructed Units (90 Single Family and 54 Townhomes)	1,311	23	73	96	79	47	126	
Proposed School 1,600 Students	3,216	540	460	1,000	132	140	272	
50% of Proposed Additions to The Fields at Canterbury	1,401	24	75	99	81	48	129	
TOTAL	5,928	587	608	1,195	292	235	527	

#### C. Annual Growth

To establish traffic growth due to population growth or small scale development, TDOT historical traffic count data was obtained at locations within the general project vicinity. The TDOT historical traffic count data includes traffic volume counts conducted annually on Columbia Pike beginning in 1985. The available historical count data was tabulated and analyzed to identify patterns or growth trends.

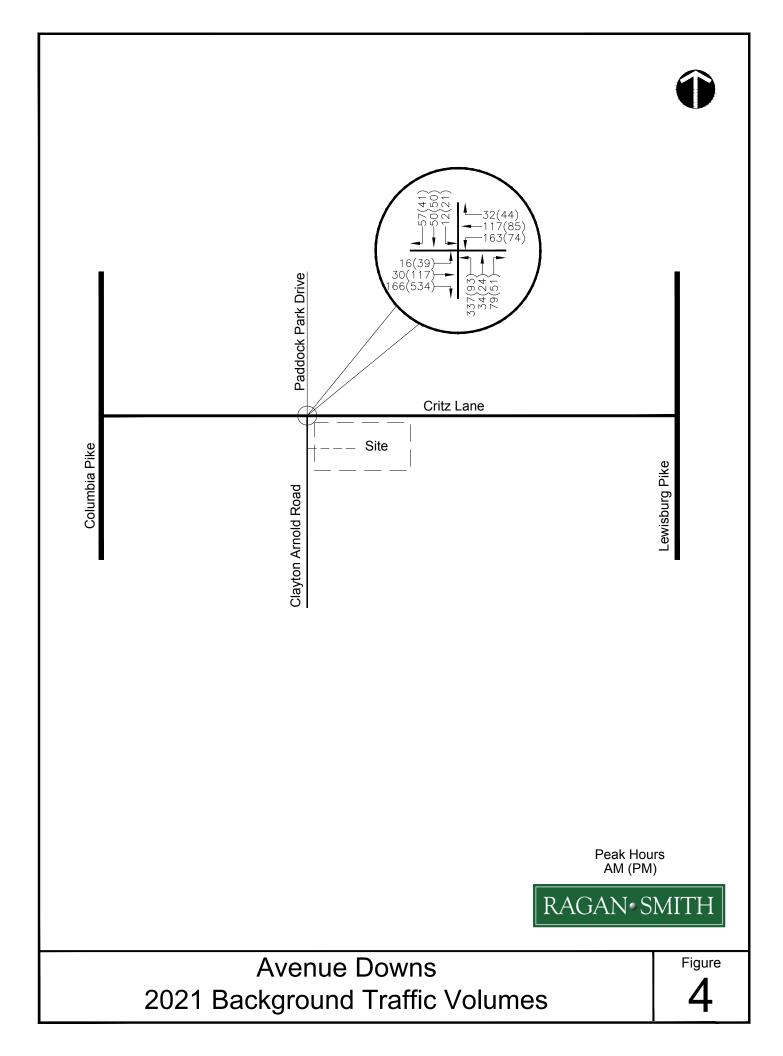

Based upon linear regression analysis of this data, we will use a **2** percent annual growth rate as the base growth for the existing traffic volumes. This annual growth rate is consistent with the Comprehensive Traffic Impact Study prepared by RPM Transportation Consultants, LLC for the Town of Thompson's Station.

#### D. Background Traffic

Background traffic for the future traffic forecasts was compiled based on the following:

- 2017 existing traffic data
- Specific development expected traffic volumes
  - The Fields at Canterbury approved but not yet constructed units
  - o Thompson's Station Elementary and Middle Schools
  - Proposed Additions to The Fields at Canterbury
- 2% annual increase of traffic volumes for the period from 2017 to 2021

Background traffic volumes on the future roadway, representing existing traffic volumes plus background growth, for the year 2021 are shown in Figure 4.

#### V. <u>PROPOSED SITE TRAFFIC</u>

#### A. Site Trip Generation

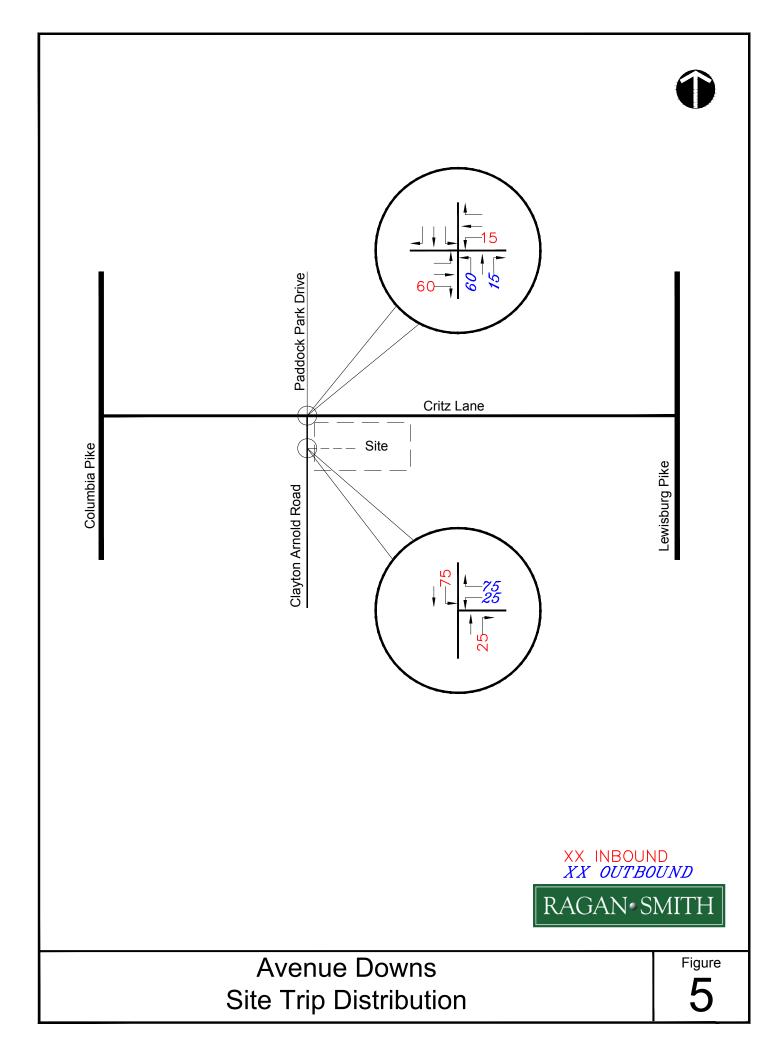

In order to quantify site-related impacts within the study area, some estimates of site trip generation and traffic assignment had to be established. Trip generation rates for the development were established using information for the weekday a.m. and p.m. peak hour of the adjacent street as shown in the *Trip Generation Manual*, 10<sup>th</sup> Edition published by the Institute of Transportation Engineers (ITE). For this study, horizon year 2021 will include the completion of Avenue Downs. Trip generation for Avenue Downs is shown in Table 2.

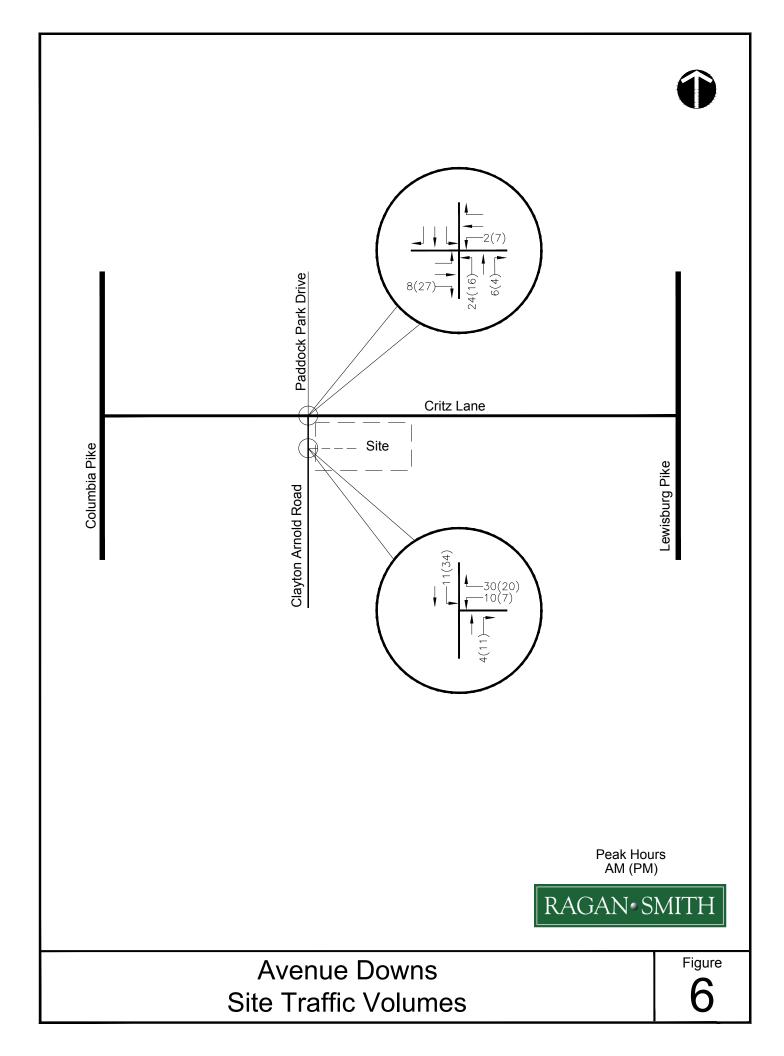

TABLE 2								
TRIP GENERATION: AVENUE DOWNS								
Land Use	Tetel Unite	Daily	A.M. Peak Hour			P.M. Peak Hour		
Land Use	Total Units	Trips	Enter	Exit	Total	Enter	Exit	Total
Single Family Homes	69 units	739	14	40	54	45	26	71

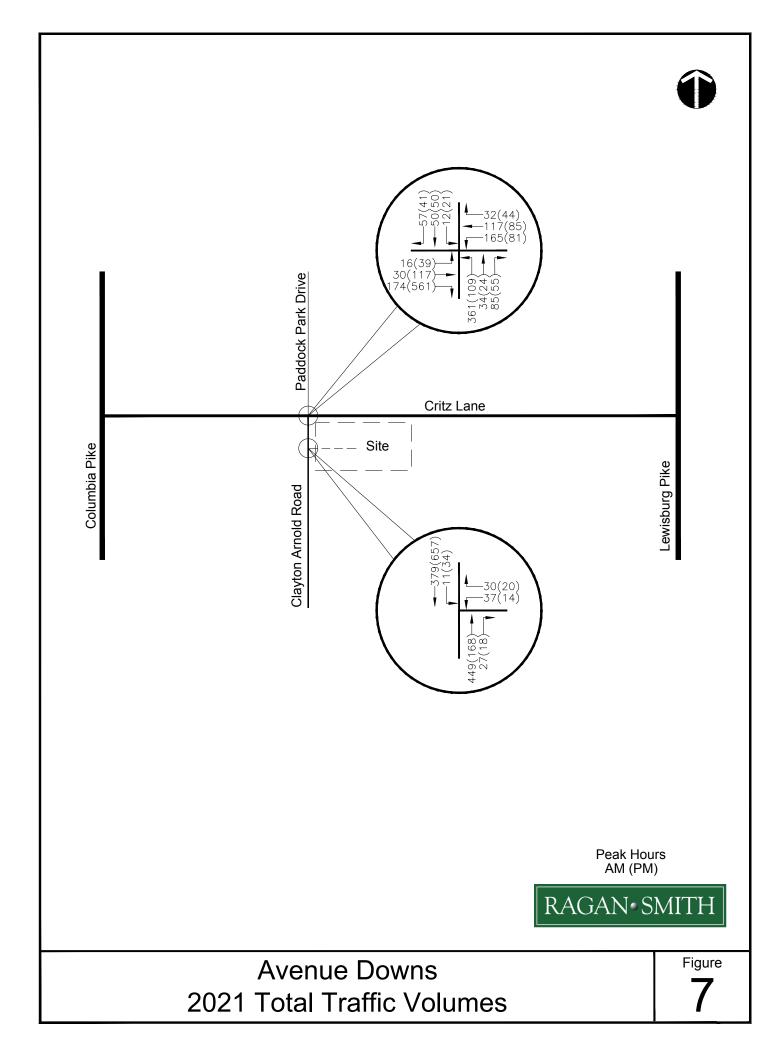

#### B. Site Trip Distribution and Assignment

Site trips were distributed based primarily upon the prevalent commuter patterns in the area and the proximity and routes to major transportation facilities. Figure 5 shows the distribution of the residential trips for Avenue Downs on the adjacent roadway.

Site traffic volumes generated by Avenue Downs in the horizon year 2021 are shown in Figure 6. The accumulation of existing, background growth, and site-generated traffic for the horizon year 2021 is shown in Figure 7.

#### VI. TRANSPORTATION ANALYSIS

#### A. Intersection Capacity Analysis

In order to determine the quality of existing traffic operations and identify capacity deficiencies, intersection capacity analyses were conducted at the following intersections.

- Critz Lane at Clayton Arnold Road
- Clayton Arnold Road at Proposed Access

Capacity analyses were conducted according to the methodology and procedures outlined in the *Highway Capacity Manual*, HCM 2010, published by Transportation Research Board. Capacity analysis results for the a.m. peak hour are shown in Table 3.

TABLE 3								
INTERSECTION CAPACITY ANALYSIS RESULTS – A.M. PEAK HOUR								
		Level of Service (avg. delay/vehicle – sec.)						
Intersection	Condition <sup>(1)</sup>	2017 Existing	2021 Background	2021 Total

	TABLE 5					
LEVEL OF SERVICE DESCRIPTIONS FOR UNSIGNALIZED INTERSECTIONS						
Level of Service Description Control Dela (sec. /veh.						
А	Usually no conflicting traffic	0 - 10				
В	Occasionally some delay due to conflicting traffic	> 10 - 15				
С	Delay is noticeable but not inconveniencing	> 15 - 25				
D	D Delay is noticeable and irritating, increased risk taking > 25 - 35					
E	E Delay approaches tolerance level, risk taking likely > 35 - 50					
F	F Delay exceeds tolerance level, high likelihood of risk taking > 50					
Source: Highway Capacity Manual, HCM 2010						

Level of service (LOS) criteria for unsignalized intersections is shown in Table 5.

#### B. Analysis Impact Thresholds

The Town of Thompson's Station has developed traffic impact thresholds for this project to determine the quality of future traffic operations and identify capacity deficiencies. The following thresholds indicate unsatisfactory conditions that would require mitigation:

- Overall intersections or intersection approaches operating at or below LOS E.
- Individual turning movements operating at LOS F.
- •
- 95<sup>th</sup> percentile turn lane queues exceeding the available storage length. 95<sup>th</sup> percentile thru movement queues stretching back far enough to block an • adjacent intersection or major driveway.

After conducting the capacity analysis, the intersections and individual turning movements are expected to operate at acceptable level of service based on the guidelines presented above and the queue lengths are not expected to exceed the storage length provided.

#### C. Turn Lane Warrants

The National Cooperative Highway Research Program (NCHRP) Report 457 provides guidance for evaluating intersection improvements at unsignalized intersections. Specific volume-based warrants have been checked to evaluate the need for right turn and left turn deceleration and storage lanes.

Table 6 below details pertinent right turn lane warrant information for applicable intersections in the study area.

TABLE 6							
RIGHT TURN LANE WARRANT ANALYSIS							
Location Peak Hour Speed Major-Road Right-Turn Right-Turn B Volume Volume Warranted							
Clayton Arnold Road (NB) at	A.M.	30	476	27	No		
Project Access	P.M.	- 30	186	18	No		

Table 7 below details pertinent left turn lane warrant information for applicable intersections in the study area.

TABLE 7							
LEFT TURN LANE WARRANT ANALYSIS							
Location Peak Hour Speed Opposing Advancing L% Left-Turn Volume Volume Warranted						Bay	
Clayton Arnold Road (SB) at	A.M.	30	476	390	3	No	
Project Access	P.M.	- 30	186	691	5	No	

#### D. Safety Analysis

A summary of historic crash data on Critz Lane between Columbia Pike and Lewisburg Pike for the period between 2010 and 2017 is shown below in Table 11.

TABLE 8 HISTORIC CRASH SUMMARY							
Year	Fatal	Incapacitating Injury	Other Injury	Property Damage	Crashes		
2010	0	0	0	1	1		
2011	0	0	2	1	3		
2012	0	0	3	1	4		
2013	0	1	2	7	10		
2014	0	0	1	3	4		
2015	0	0	1	7	8		
2016	0	0	2	3	5		
2017	1	0	2	5	8		
Source: TDOT Enhanced Tennessee Roadway Information Management System (E-TRIMS)							

Even though there are not sufficient historical traffic counts available on Critz Lane to determine average crash rates and make comparisons to regional or statewide averages, the Highway Safety Manual and Crash Modification Factors Clearinghouse indicated that the planned improvements to Critz Lane can improve safety as described below.

- The crash reduction factor for increasing the lane width is 28 percent. The lane width on Critz Lane is being increased to 11 feet.
- The reduction factor for property damage crashes when providing a new shoulder that is 4 feet wide is 19 percent. The Critz Lane improvements will provide a shoulder with a width of 4 feet.
- The reduction factor for all crash types is 25 percent and the reduction factor for injury and fatal crashes is 35% when replacing a two-way stop intersection with a roundabout. On Critz Lane, the two-way stop intersections at Clayton Arnold Road / Paddock Park Drive and at Pantall Road will be replaced with roundabouts.

#### VII. CONCLUSIONS AND RECOMMENDATIONS

#### A. Introduction

Based upon a review of the existing and future proposed conditions within the study area, recommendations have been developed to provide efficient ingress and egress for Avenue Downs while managing the impact to non-site trips on the roadway network. Additionally, recommendations for offsite intersections have also been provided to confirm improvement plans underway by others or to provide specific improvements that will mitigate a development impact.

#### B. Critz Lane at Clayton Arnold Road

The Critz Lane improvements proposed by the Town of Thompson's Station include a single lane roundabout at this intersection with one lane entrances and exits on all four approaches. The roundabout layout provided by the Town appears to incorporate many of the accepted methods of modern roundabout design.

Traffic operations in the horizon year 2021 for total traffic conditions at the intersection of Critz Lane at Clayton Arnold Road are expected to be characterized by level of service D during the a.m. peak hour and level of service B in the p.m. peak hour.

The following improvements are recommended at the intersection of Critz Lane at Clayton Arnold Road:

- The Town of Thompson's Station's proposal to construct a roundabout at this intersection is appropriate based on the operational and safety advantages that a roundabout will have over two-way stop control at this location.
- The improvements proposed to be constructed as part of the Town of Thompson's Station's Critz Lane project will continue to be appropriate after development of Avenue Downs.

#### C. <u>Clayton Arnold Road at Proposed Access</u>

Traffic operations in the horizon year 2021 for total traffic conditions at the unsignalized intersection of Critz Lane at the proposed access is expected to be characterized by level of service C during the a.m. peak hour and level of service B during the p.m. peak hour.

Right turn and left turn lane warrants were conducted at the intersection of Critz Lane at the proposed access. It was concluded that turn lanes are not warranted at this intersection based on the forecasted traffic volumes.

The following improvements are recommended at the intersection of Critz Lane at the proposed access:

- The Proposed Access should consist of one lane in each direction with pavement widths in compliance with the appropriate roadway section shown in the Town's Land Development Ordinance.
- Proposed grading, landscaping, and development monumentation or signage should be designed so that AASHTO intersection sight distance is not obstructed for the proposed access.

Development	Dally	Enter	Exit	Total	Enter	Exit	Total								
Avenue Downs (69 Single Family)	739	14	40	54	45	26	71								
TOTAL	739	14	40	54	45	26	71								

## **TRIP GENERATION - 10th EDITION - REMAINING CANTERBURY**

### Single-Family Detached Housing - 90 Dwelling Units

Use ITE Land Use Code 210 (Single-Family Detached Housing) and associated trip generation rates for 24-hour total trips and peak hour trips.

Average Daily Traffic

 $\label{eq:Ln(T) = 0.92 Ln(X) + 2.71} \\ Ln(T) = 0.92 Ln(90) + 2.71 \\ T = 944$ 

A.M. Peak Hour of Adjacent Street Traffic

T = 0.71(X) + 4.8T = 0.71(90) + 4.8 T = 69

> Enter = 0.25(69) = 17Exit = 0.75(69) = 52

P.M. Peak Hour of Adjacent Street Traffic

> Enter = 0.63(92) = 58Exit = 0.37(92) = 34

## **TRIP GENERATION - 10th EDITION - REMAINING CANTERBURY**

### Multifamily H 54 Dwelling Units

Low-rise multifamily housing includes apartments, townhouses, and condominiums located within the same building with at least three other dwelling units and that have one or two levels.

Average Daily Traffic

 $\begin{array}{l} \mathsf{T} = 7.56(\mathsf{X}) - 40.86 \\ \mathsf{T} = 7.56(54) - 40.86 \\ \mathsf{T} = 367 \end{array}$ 

A.M. Peak Hour of Adjacent Street Traffic

 $\label{eq:Ln(T) = 0.95 Ln(X) - 0.51} \\ \mbox{Ln(T) = 0.95 Ln(54) - 0.51} \\ \mbox{T = 27} \\ \end{tabular}$ 

Enter = 0.23(27) = 6Exit = 0.77(27) = 21

P.M. Peak Hour of Adjacent Street Traffic

 $\begin{array}{l} Ln(T) = 0.89 \ Ln(X) \ \text{--} \ 0.02 \\ Ln(T) = 0.89 \ Ln(54) \ \text{--} \ 0.02 \\ T = 34 \end{array}$ 

Enter = 0.63(34) = 21Exit = 0.37(34) = 13

## **TRIP GENERATION - 10th EDITION**

## Elementary School - 800 Students

Use ITE Land Use Code 520 (Elementary School) and associated trip generation rates for 24hour total trips and peak hour trips.

## Average Daily Traffic

T = 1.89(X) T = 1.89(800) T = 1512

A.M. Peak Hour

T = 0.67(X)T = 0.67(800)T = 536

> Enter = 0.54(536) = 289 Exit = 0.46(536) = 247

P.M. Peak Hour of Adjacent Street Traffic

T = 0.17(X)T = 0.17(800)T = 136

> Enter = 0.48(136) = 65Exit = 0.52(136) = 71

## **TRIP GENERATION - 10th EDITION**

### Middle School/Junior High School - 800 Students

Use ITE Land Use Code 522 (Middle School/Junior High School) and associated trip generation rates for 24-hour total trips and peak hour trips.

Average Daily Traffic

T = 2.13(X)T = 2.13(800)T = 1704

A.M. Peak Hour

T = 0.58(X)T = 0.58(800)T = 464

> Enter = 0.54(464) = 251 Exit = 0.46(464) = 213

P.M. Peak Hour of Adjacent Street Traffic

T = 0.17(X)T = 0.17(800)T = 136

> Enter = 0.49(136) = 67Exit = 0.51(136) = 69

## **TRIP GENERATION - 10th EDITION - AVENUE DOWNS**

### Single-Family Detached Housing - 69 Dwelling Units

Use ITE Land Use Code 210 (Single-Family Detached Housing) and associated trip generation rates for 24-hour total trips and peak hour trips.

Average Daily Traffic

 $\begin{array}{l} {\sf Ln}({\sf T}) = 0.92 \; {\sf Ln}({\sf X}) + 2.71 \\ {\sf Ln}({\sf T}) = 0.92 \; {\sf Ln}(69) + 2.71 \\ {\sf T} = 739 \end{array}$ 

A.M. Peak Hour of Adjacent Street Traffic

T = 0.71(X) + 4.8T = 0.71(69) + 4.8 T = 54

> Enter = 0.25(54) = 14Exit = 0.75(54) = 40

P.M. Peak Hour of Adjacent Street Traffic

> Enter = 0.63(71) = 45Exit = 0.37(71) = 26

## **TRIP GENERATION - 10th EDITION - PROPOSED CANTERBURY**

### Single-Family Detached Housing - 179 Dwelling Units

Use ITE Land Use Code 210 (Single-Family Detached Housing) and associated trip generation rates for 24-hour total trips and peak hour trips.

Average Daily Traffic

 $\label{eq:Ln(T) = 0.92 Ln(X) + 2.71} \\ \mbox{Ln(T) = 0.92 Ln(179) + 2.71} \\ \mbox{T = 1776} \\ \end{tabular}$ 

A.M. Peak Hour of Adjacent Street Traffic

T = 0.71(X) + 4.8T = 0.71(179) + 4.8 T = 132

> Enter = 0.25(132) = 33 Exit = 0.75(132) = 99

P.M. Peak Hour of Adjacent Street Traffic

 $\label{eq:Ln(T) = 0.96 Ln(X) + 0.20} \\ Ln(T) = 0.96 Ln(179) + 0.20 \\ T = 178$ 

Enter = 0.63(178) = 112 Exit = 0.37(178) = 66

## **TRIP GENERATION - 10th EDITION - PROPOSED CANTERBURY**

### Multifamily H 141 Dwelling Units

Low-rise multifamily housing includes apartments, townhouses, and condominiums located within the same building with at least three other dwelling units and that have one or two levels.

Average Daily Traffic

 $\begin{array}{l} T=7.56(X)-40.86\\ T=7.56(141)-40.86\\ T=1025 \end{array}$ 

A.M. Peak Hour of Adjacent Street Traffic

 $\begin{array}{l} Ln(T) = 0.95 \ Ln(X) \ \text{--} \ 0.51 \\ Ln(T) = 0.95 \ Ln(141) \ \text{--} \ 0.51 \\ T = 66 \end{array}$ 

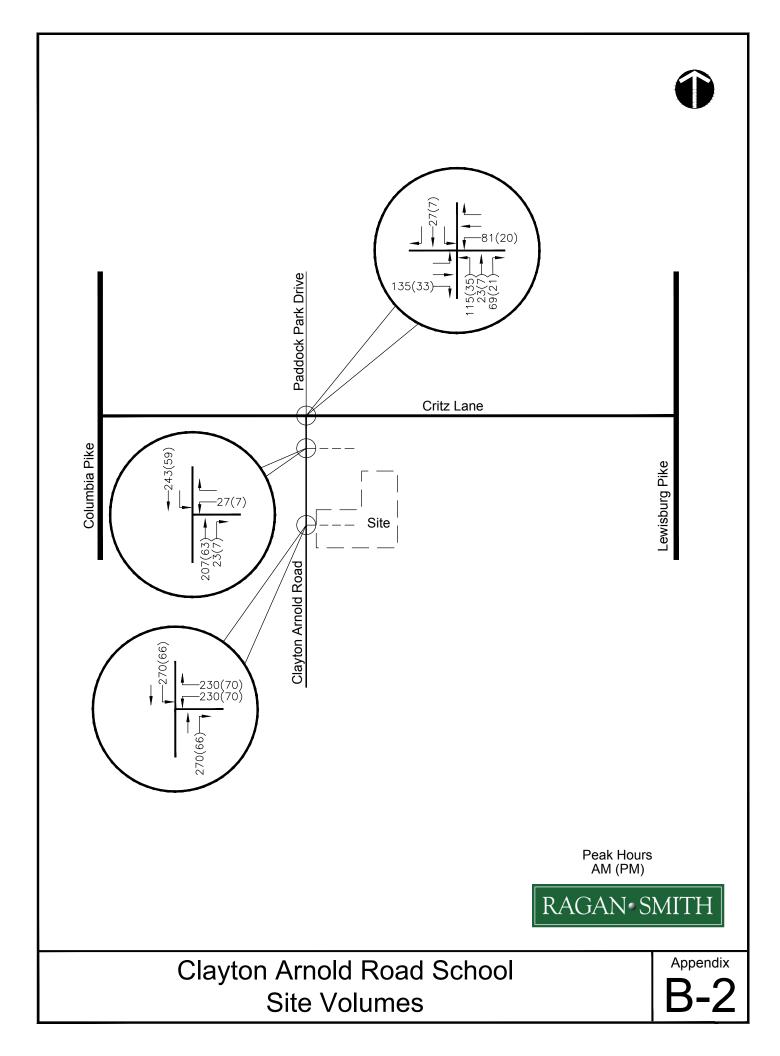

Enter = 0.23(66) = 15 Exit = 0.77(66) = 51

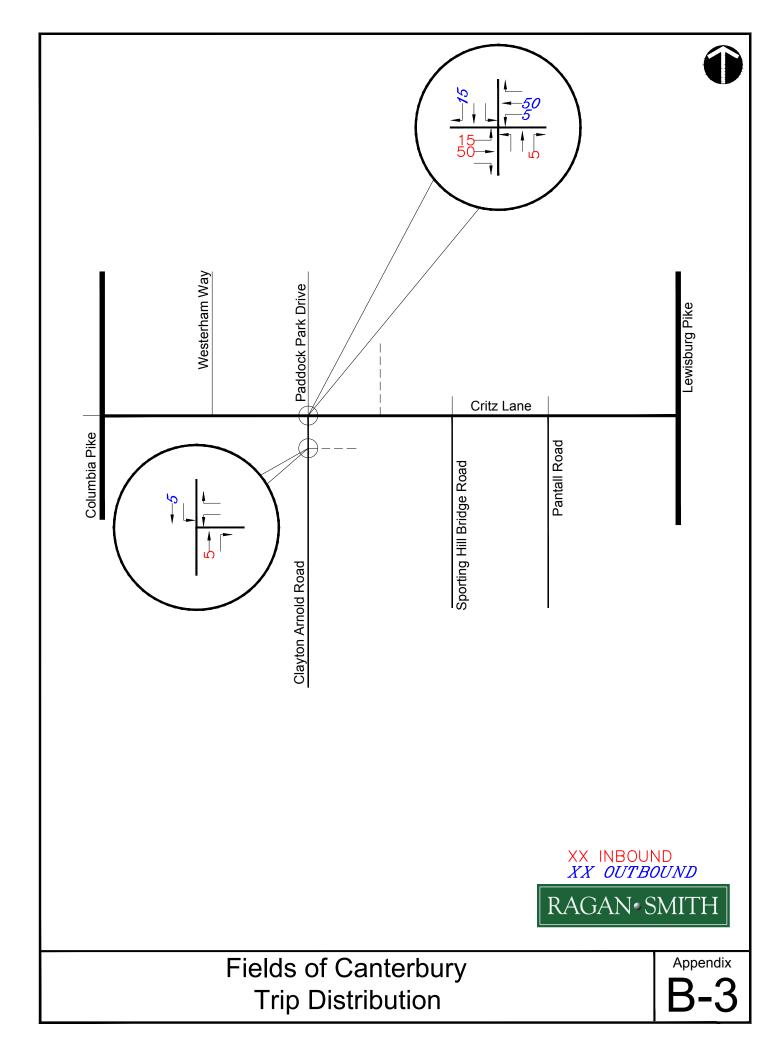

P.M. Peak Hour of Adjacent Street Traffic

 $\begin{array}{l} Ln(T) = 0.89 \ Ln(X) \ \text{--} \ 0.02 \\ Ln(T) = 0.89 \ Ln(141) \ \text{--} \ 0.02 \\ T = 80 \end{array}$ 

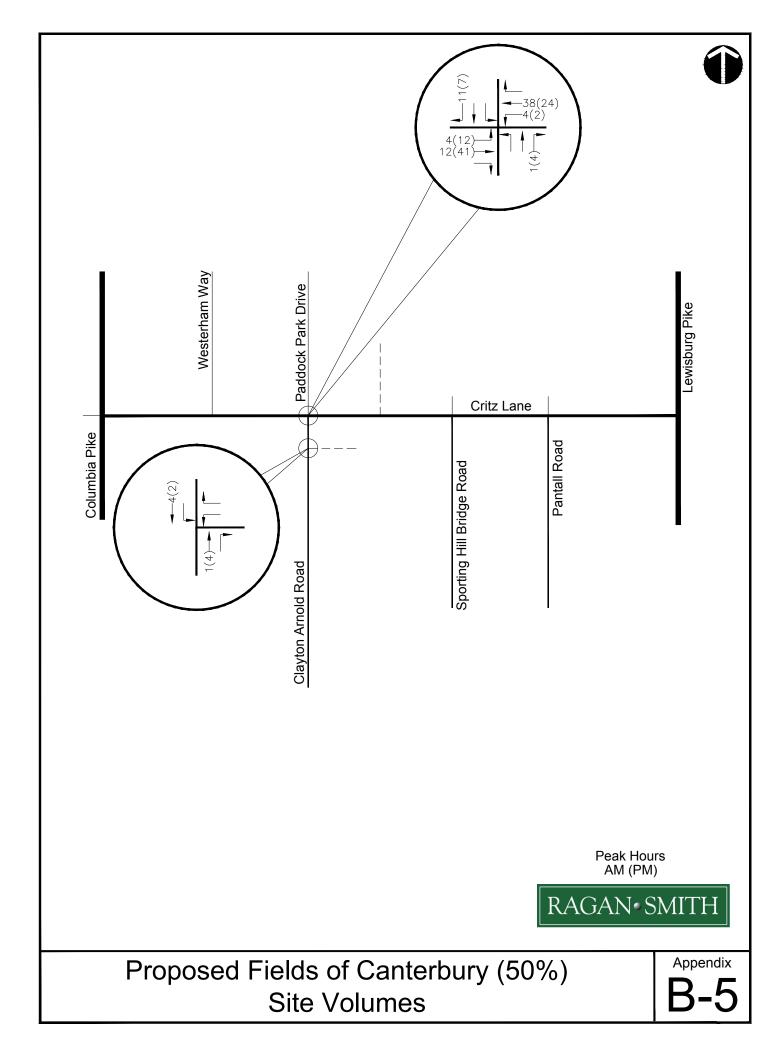

Enter = 0.63(80) = 50Exit = 0.37(80) = 30

## Thompson's Station Planning Commission Staff Report - Item 4 (FP 2018-011) July 24, 2018

## Final Plat Request for Fields of Canterbury, Section 13A for the creation of 26 lots.

## **PROJECT DESCRIPTION**

A request for a final plat was submitted by Ragan Smith Associates on behalf of Hood Development, LLC for the creation of 25 single-family lots and one open space lot within section 13A of the Fields of Canterbury.

## **BACKGROUND**

On March 28, 2017, the Planning Commission approved the preliminary plat for phase 13 which consisted of 57 single-family lots and four (4) open space lots along with the removal of 39 trees. This phase was also approved with a reduced right-of-way for Weeping Willow Lane and Sturry Cove Drive. Section 13A consists of 25 single family lots leaving 32 lots remaining for the future section (13B).

## ANALYSIS

## Final Plat

The purpose of the final plat is to provide a legal instrument where the transfer of ownership of lots is allowed and shall constitute a way where streets and other infrastructure can be accepted (LDO Section 5.2.7).

Section 13A consists of 25 single-family lots along Bramblewood Lane, Carena Terrace, Weeping Willow Lane and Sturry Cove. The setbacks are 20 feet for the front yard, 7.5 feet for the side yard, and 20 feet for the rear yard. Lot widths vary; however, the minimum lot width will be maintained at 50 feet, except where less width is permitted on the curve of a road. Bramblewood Lane, Sturry Cove and Weeping Willow are partially and will be extended into this section. The right of way includes a five-foot sidewalk and a five-foot landscape strip.

## **Open Space**

This plat includes one .09-acre open space lot. All other open space is recorded.

## Sureties

Sureties are required prior to the recordation of any final plat to ensure that all necessary improvements are guaranteed to be installed per approved construction plans. The Fields of Canterbury Phase 13 construction plans are approved and improvements have been started within this phase. Roadway work is completed to base with curbs, drainage and utilities in place and erosion control is installed. After an evaluation of this section and the progress of the construction, the Town Engineer recommends that the roads, drainage and erosion control surety should be set at \$118,000.

Sewer is installed with the services in place, however the system has not been tested and flow is not applied to the system. After an evaluation of the progress of the sewer, the Town Engineer recommends that the sewer surety be set at \$106,000.

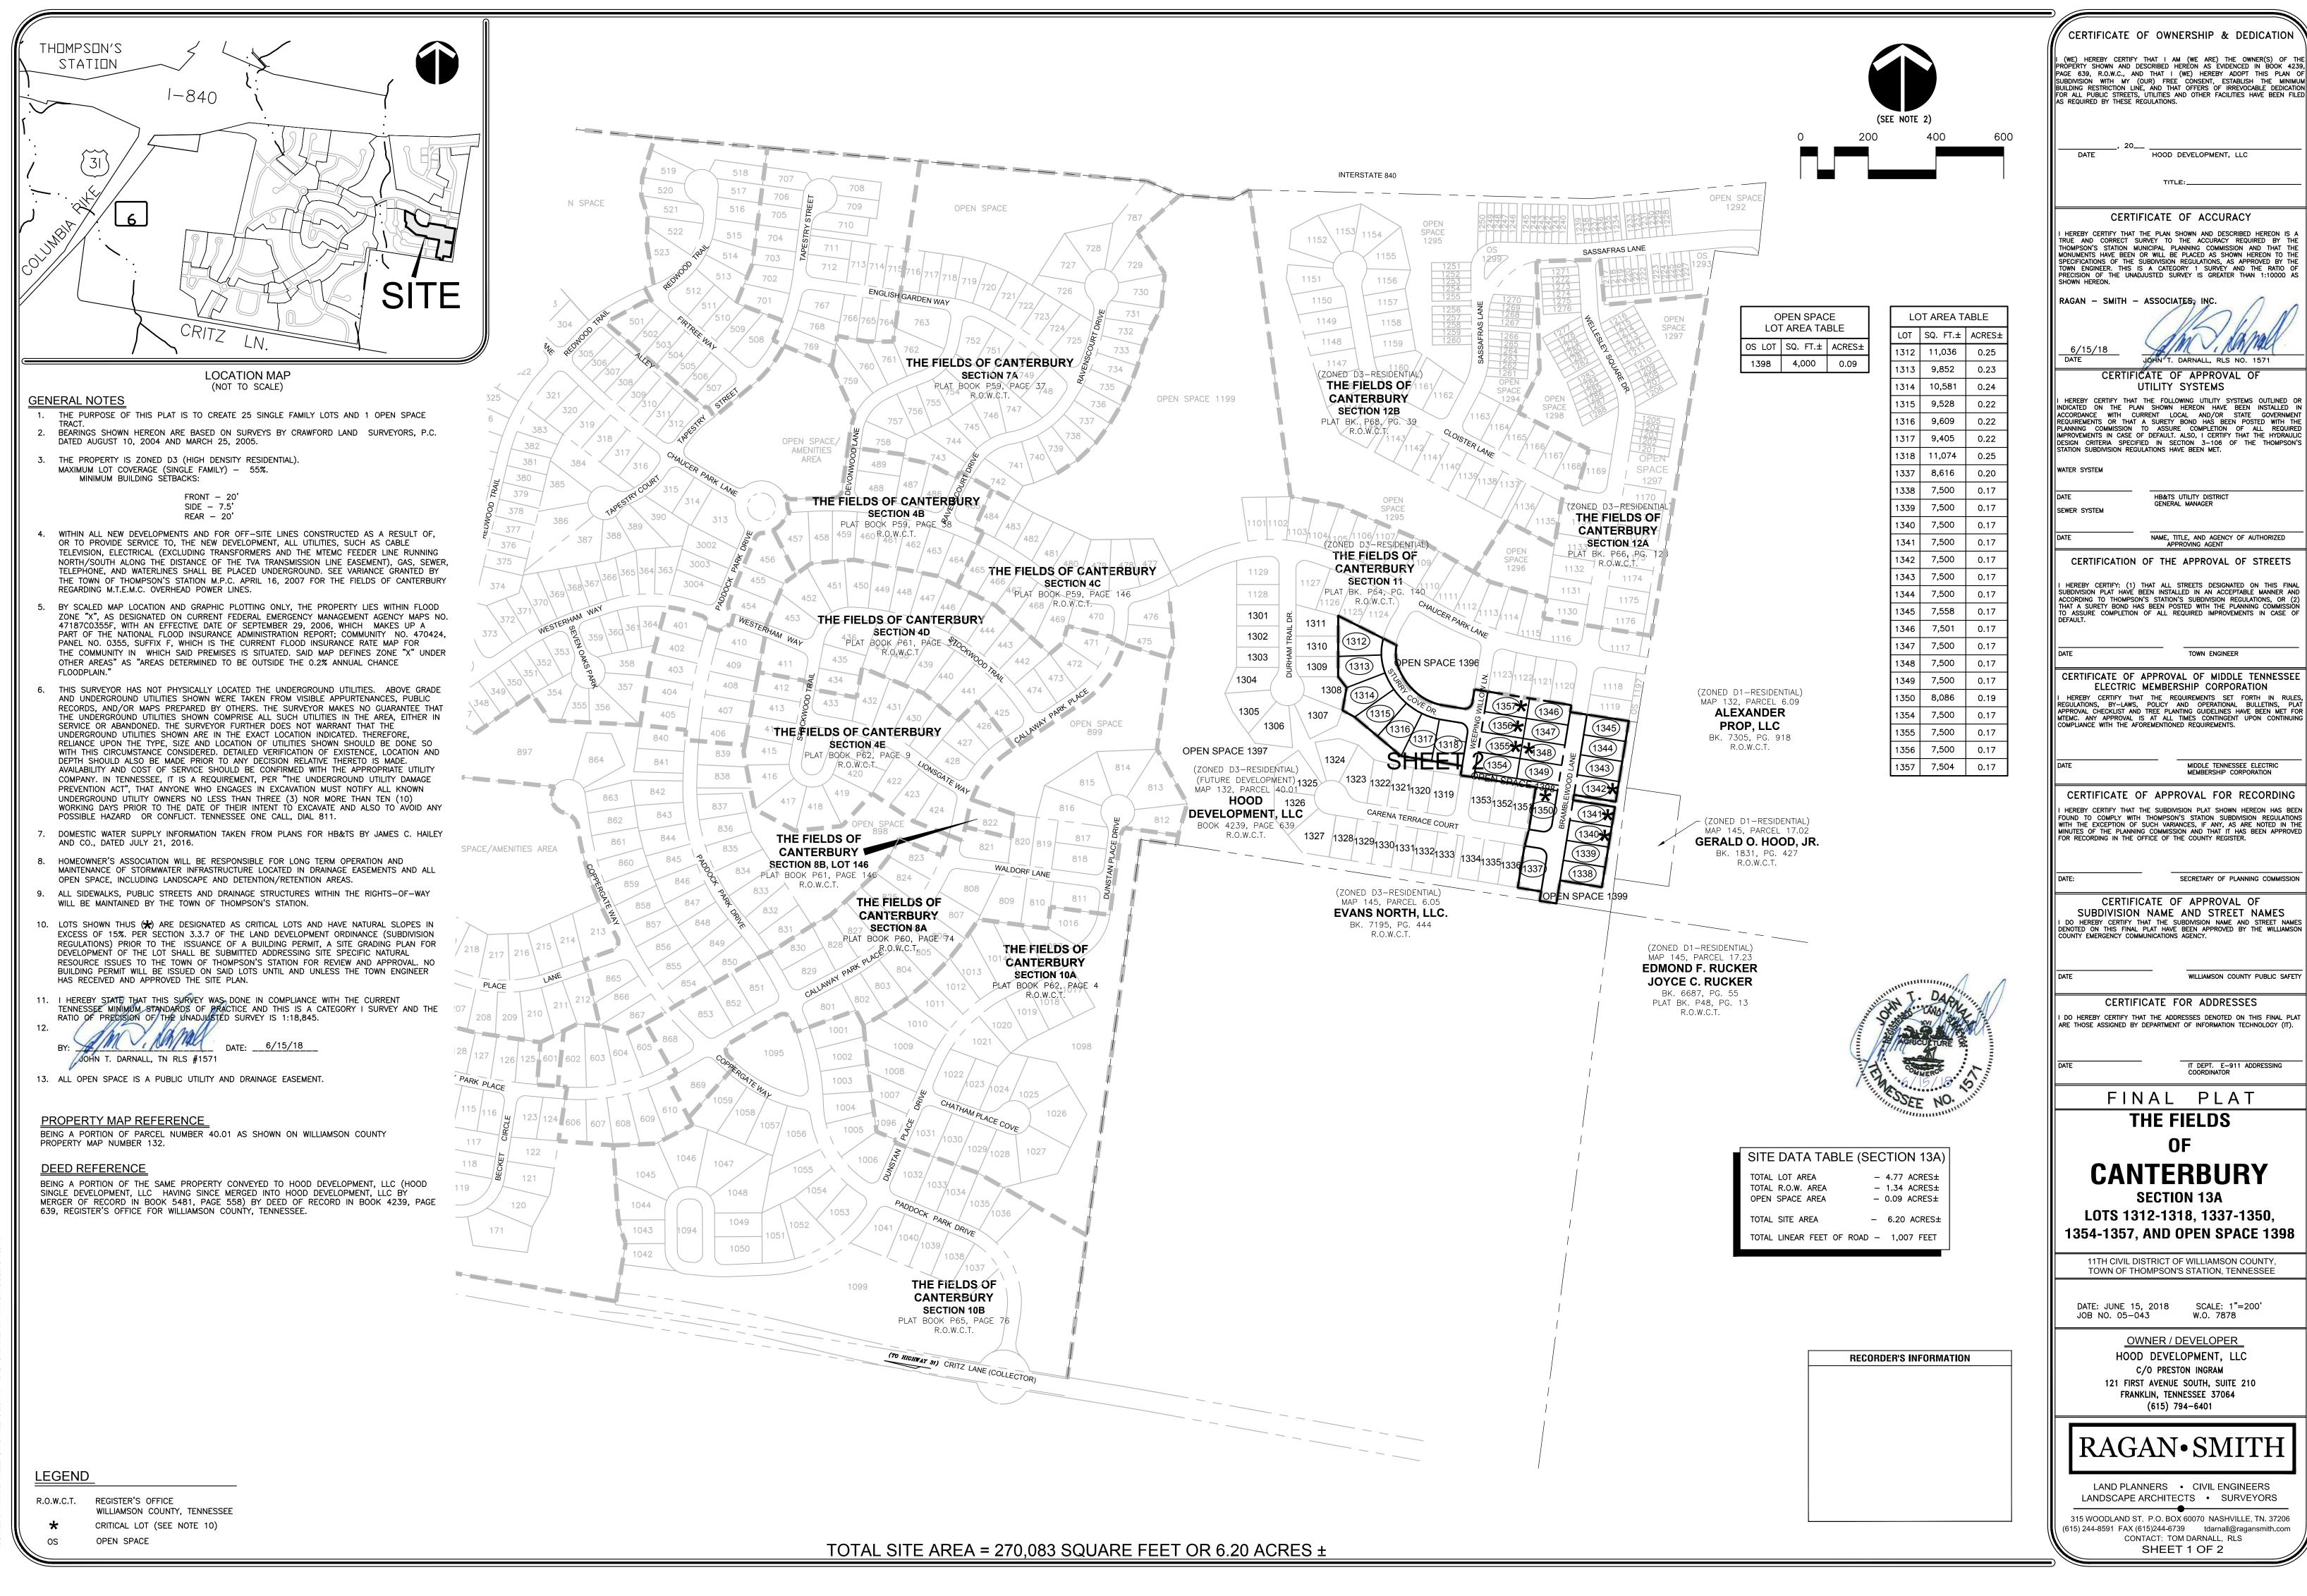

## **RECOMMENDATION**

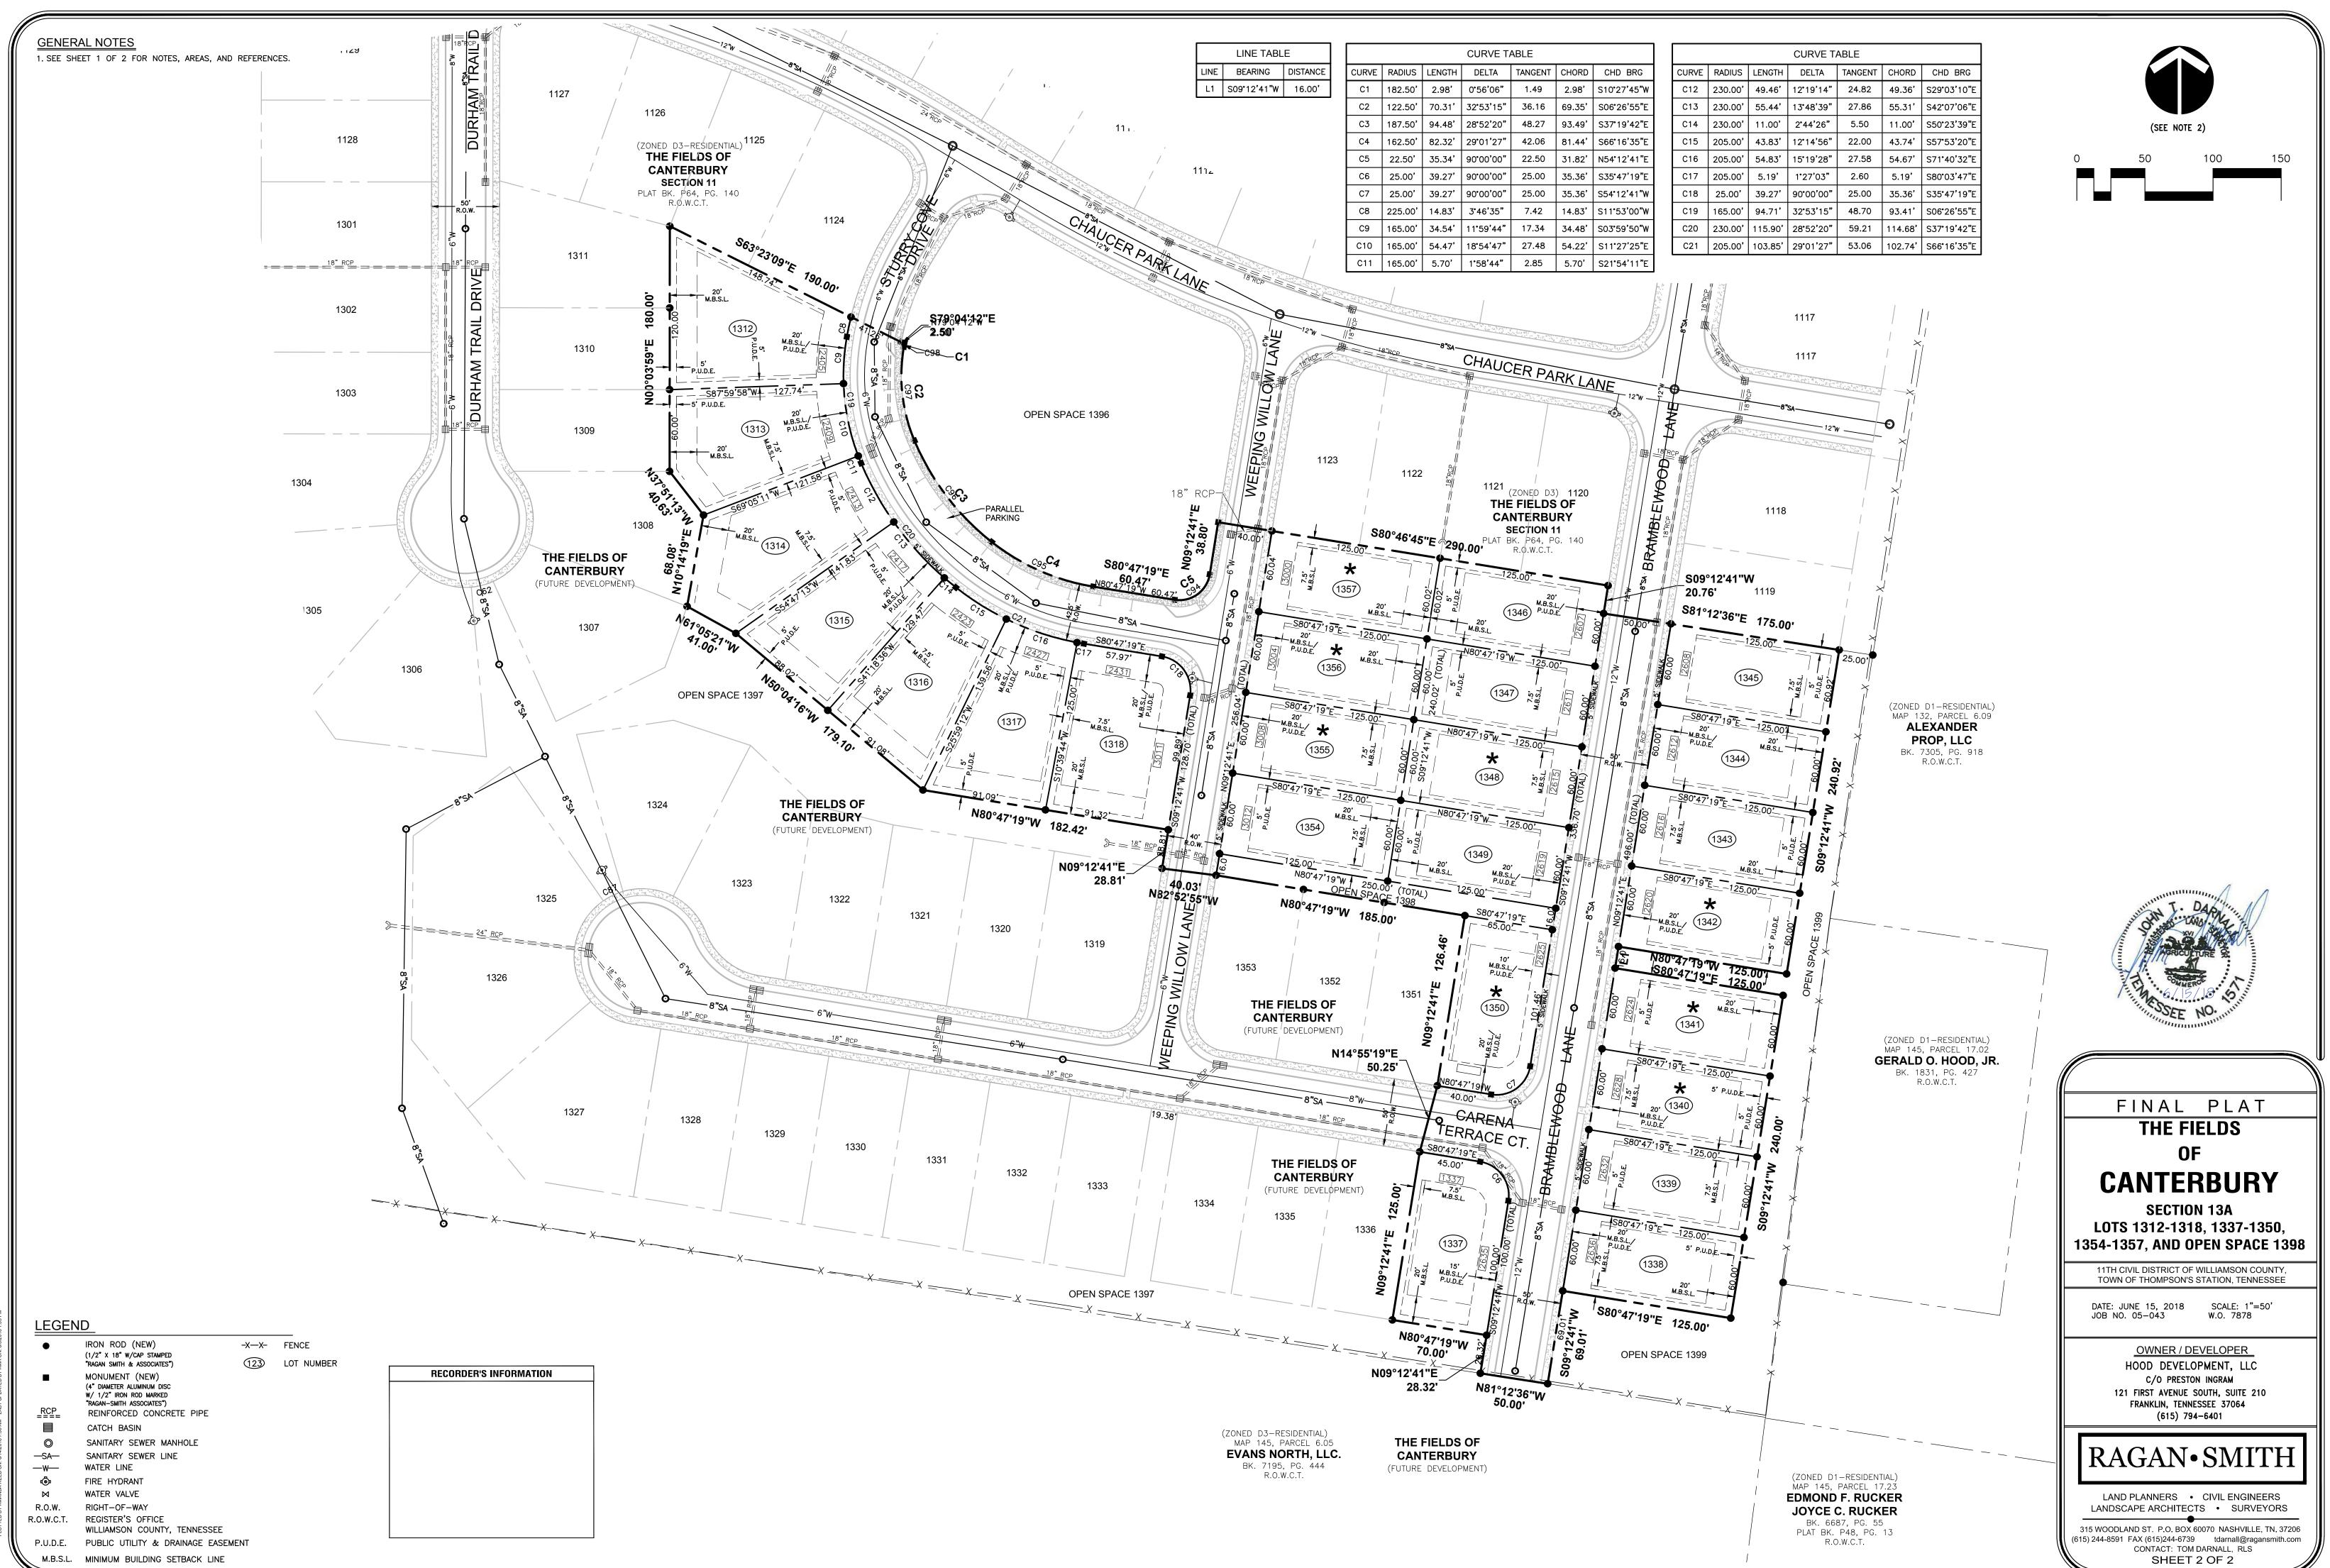

Based on the project's compliance with the approved Phase 13 preliminary plat, Staff recommends that the Planning Commission approve the final plat with the following contingencies:

- 1. Prior to recordation of the final plat, a surety shall be submitted to the Town in the amount of \$118,000 for roadways, drainage and utilities.
- 2. Prior to recordation of the final plat, a surety shall be submitted to the Town in the amount of \$106,000 for sewer.
- 3. All tree replacements shall be installed in accordance with the approved replacement plan for phase 13.
- 4. As built drawings shall be required for the drainage and sewer system with a letter from the Design Engineer that they are constructed per the approved drawings and functioning as intended.

## Thompson's Station Planning Commission Staff Report – Item 5 (File: SP 2018-004) July 24, 2018

## A site plan request for the installation of electric lines within Tollgate Village in phases 16 and 17.

## **PROJECT DESCRIPTION**

Ragan Smith has submitted a proposal for the installation/expansion of electric lines through phases 16 and 17 of Tollgate Village.

## **BACKGROUND**

Electricity is provided to Tollgate Village by Middle Tennessee Electric Membership Corporation (MTEMC). Based upon a recent submittal from the developer of Tollgate Village, it was determined that additional lines are necessary to provide electricity to the neighborhood. Therefore, the developer has submitted a plan to install a new line along the north side of the project area in proximity to the West Harpeth River to provide this service to future phases of Tollgate.

## **ANALYSIS**

The LDO states in Section 3.12.3 of the LDO that "all electrical and communication service lines located within any subdivision approved under authority of these regulations shall be placed underground." The proposed lines, as submitted are above ground lines and therefore not permitted by the Town's Land Development Ordinance. The utility is necessary for the subdivision; however, Staff recommends that the expansion be completed in accordance with the Town's codes. Therefore, Staff recommends a contingency to require that the utility be placed underground.

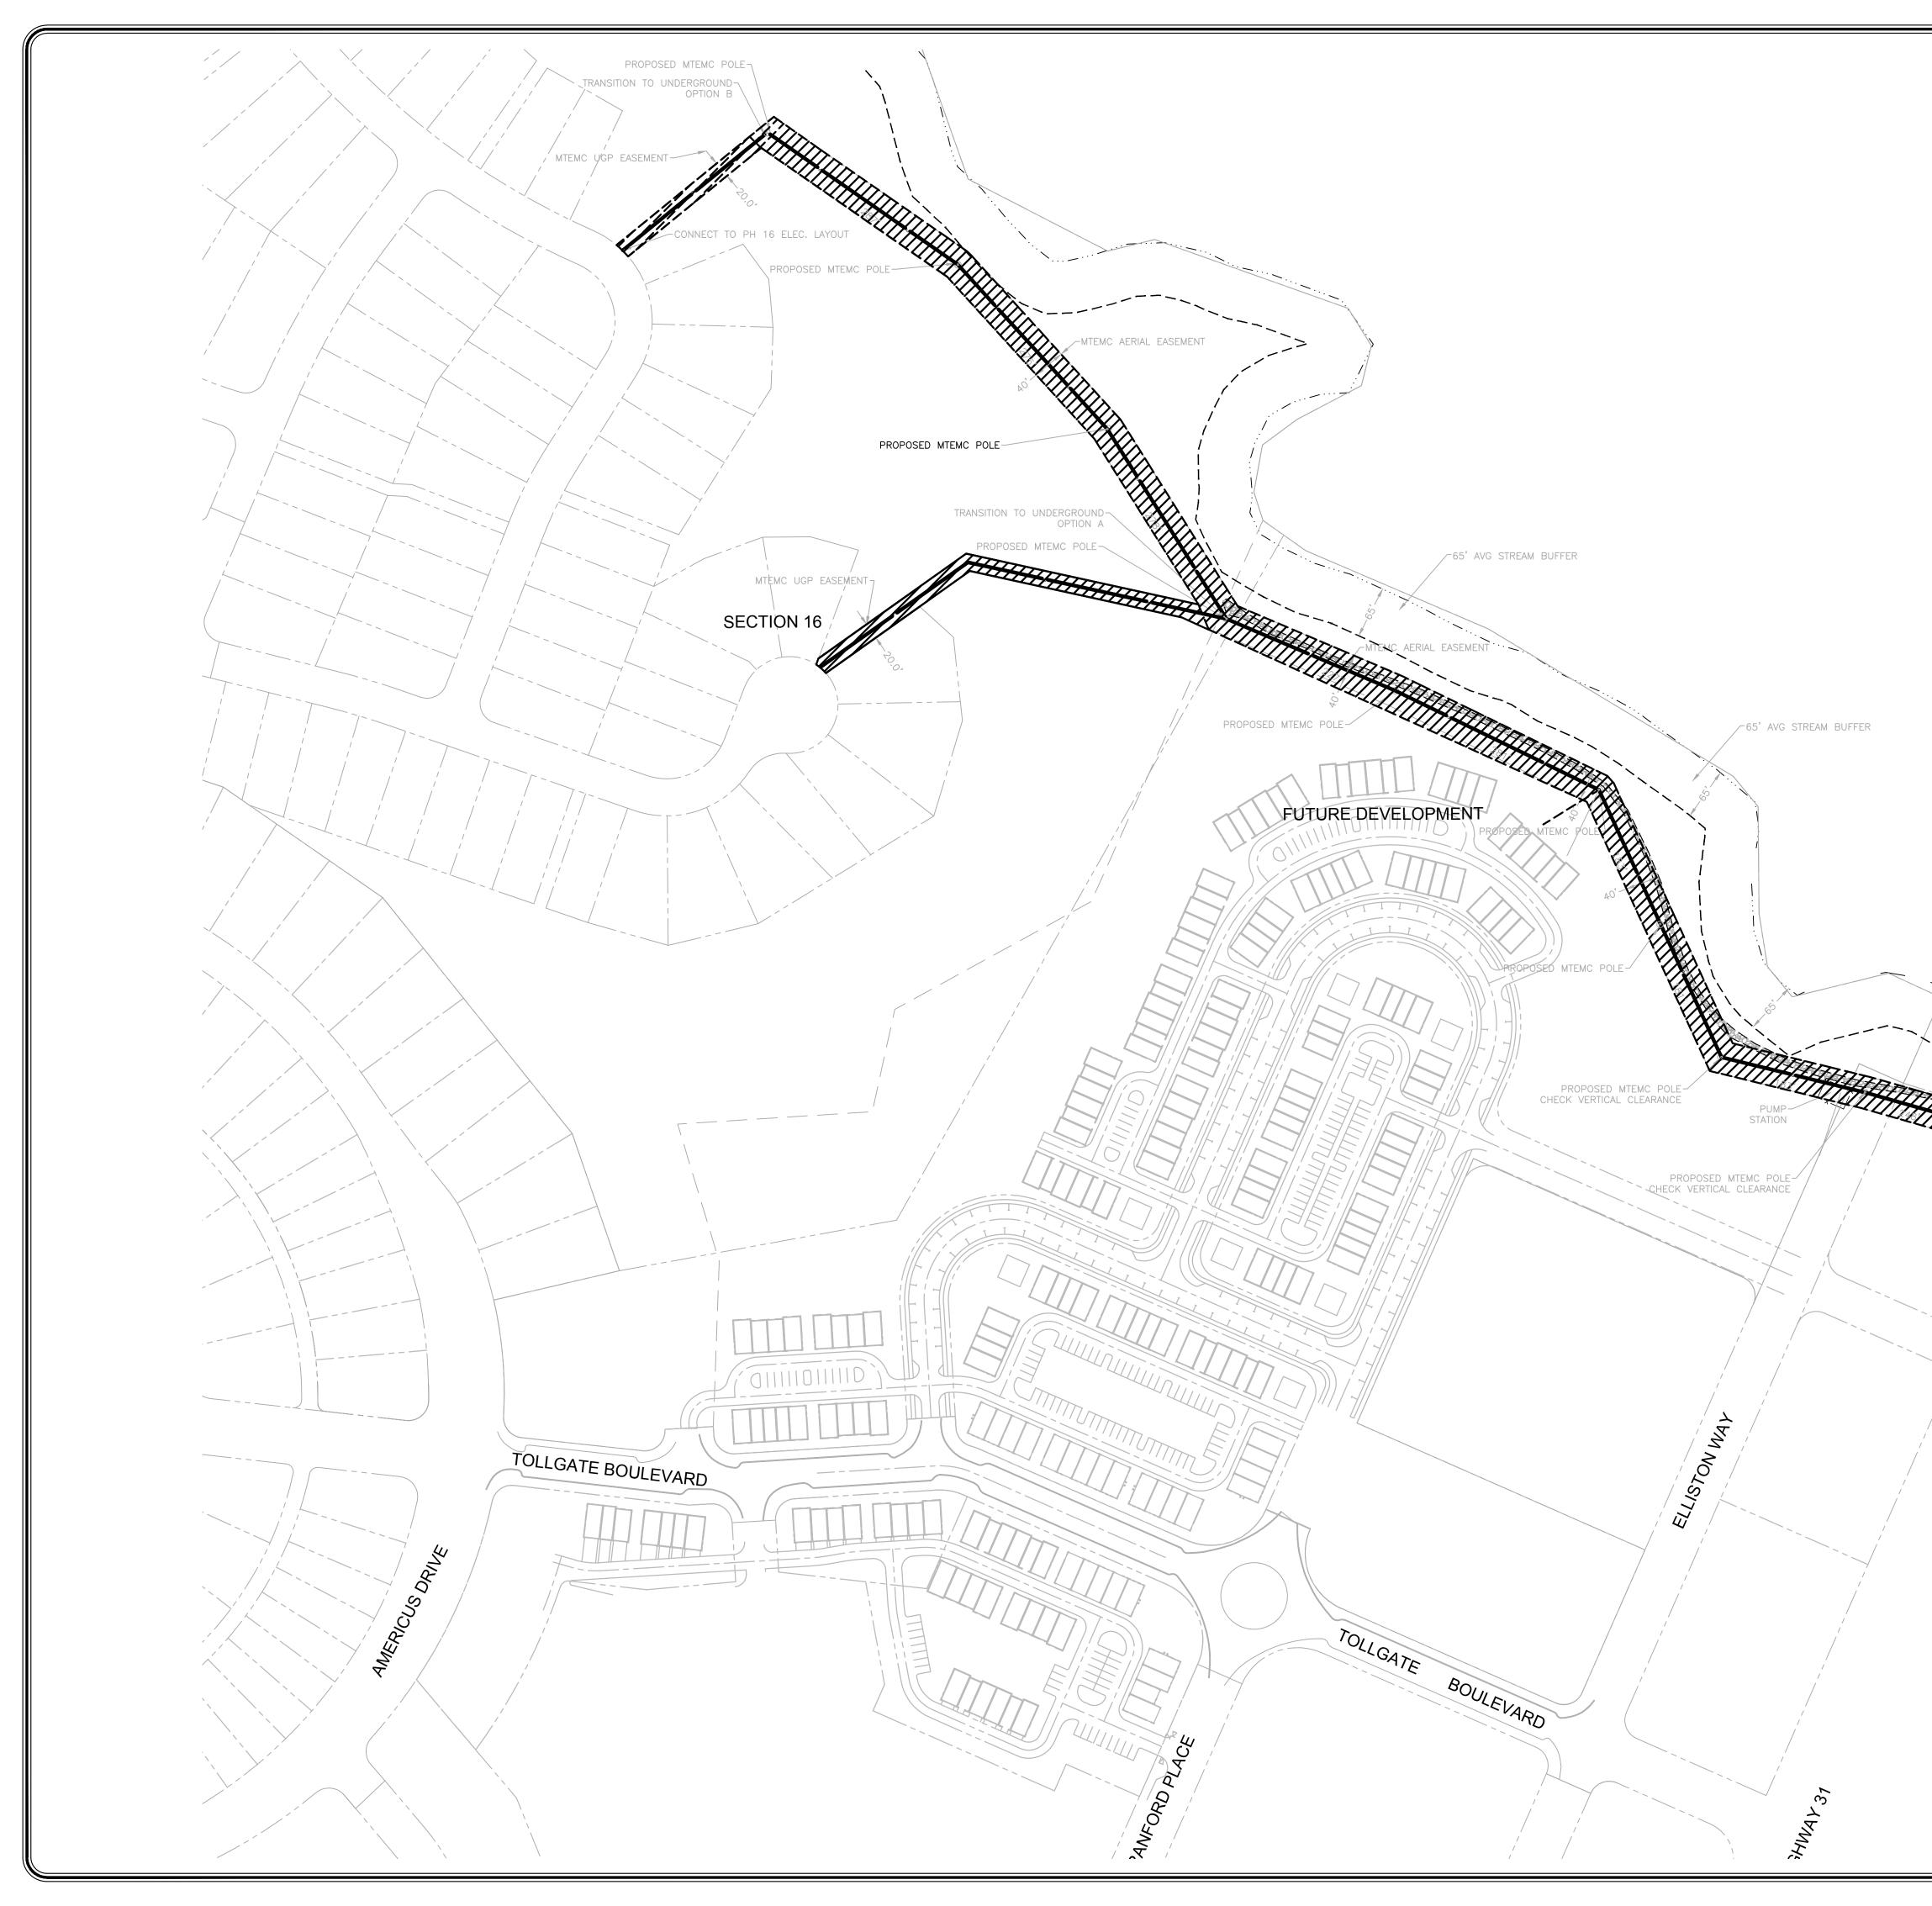

## **RECOMMENDATION**

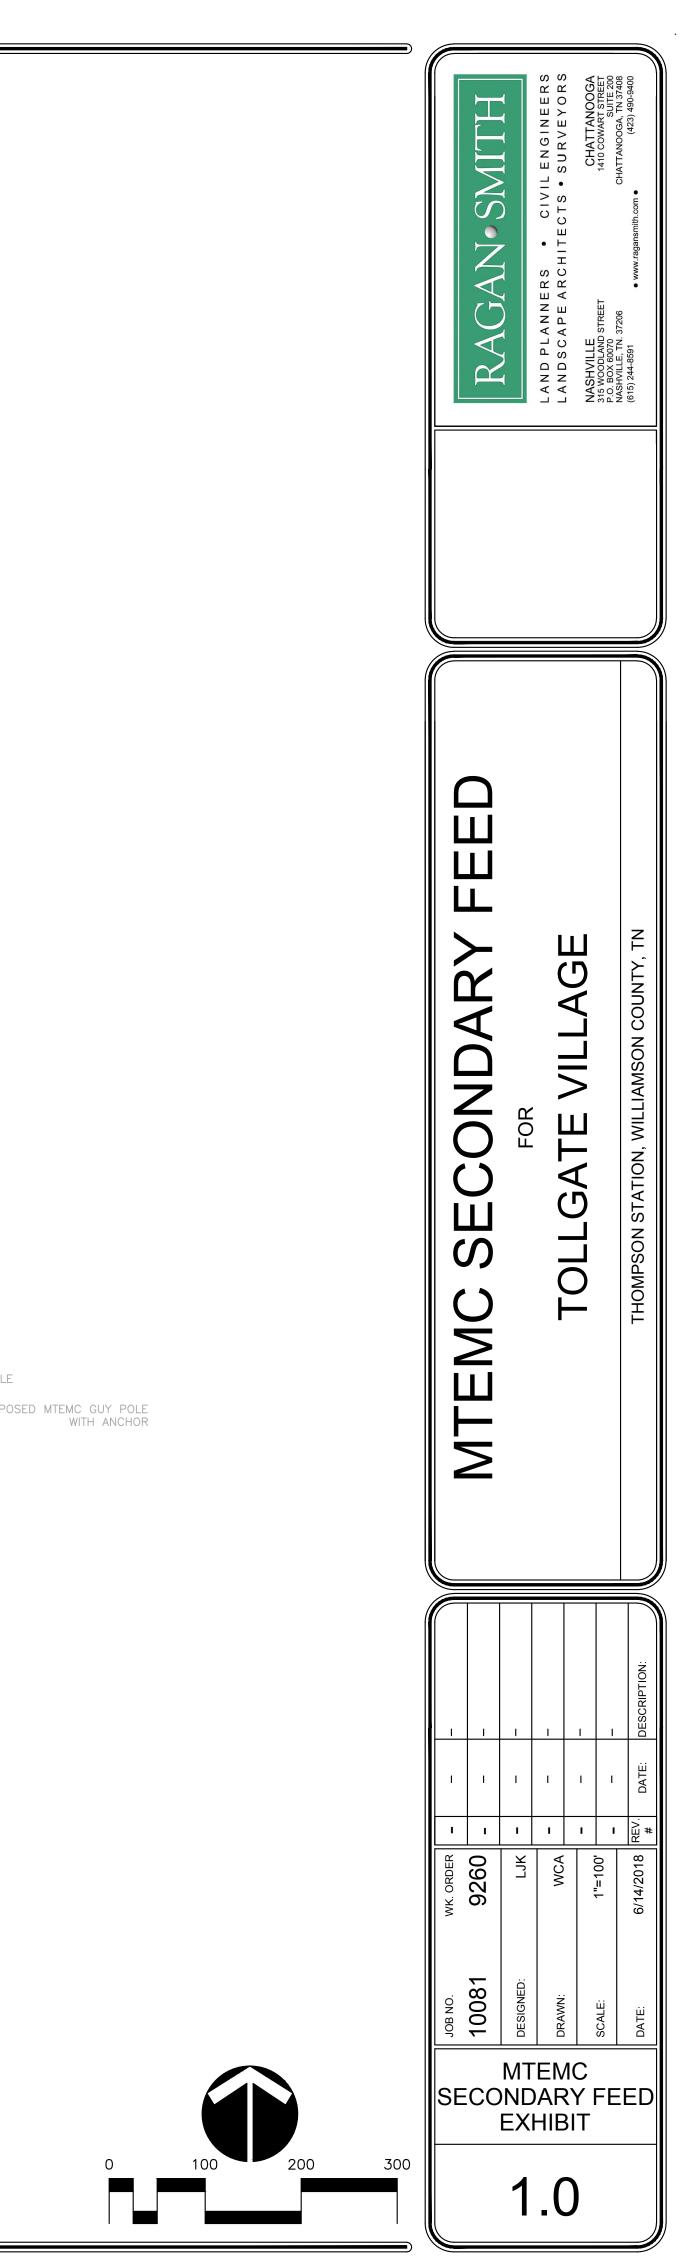

Based on the need to provide adequate service to existing and future residents, Staff recommends that the Planning Commission approve the proposal to install the electric line with the following contingency:

1. All electrical lines installation/expansion within the Tollgate Village subdivision shall be installed underground.
